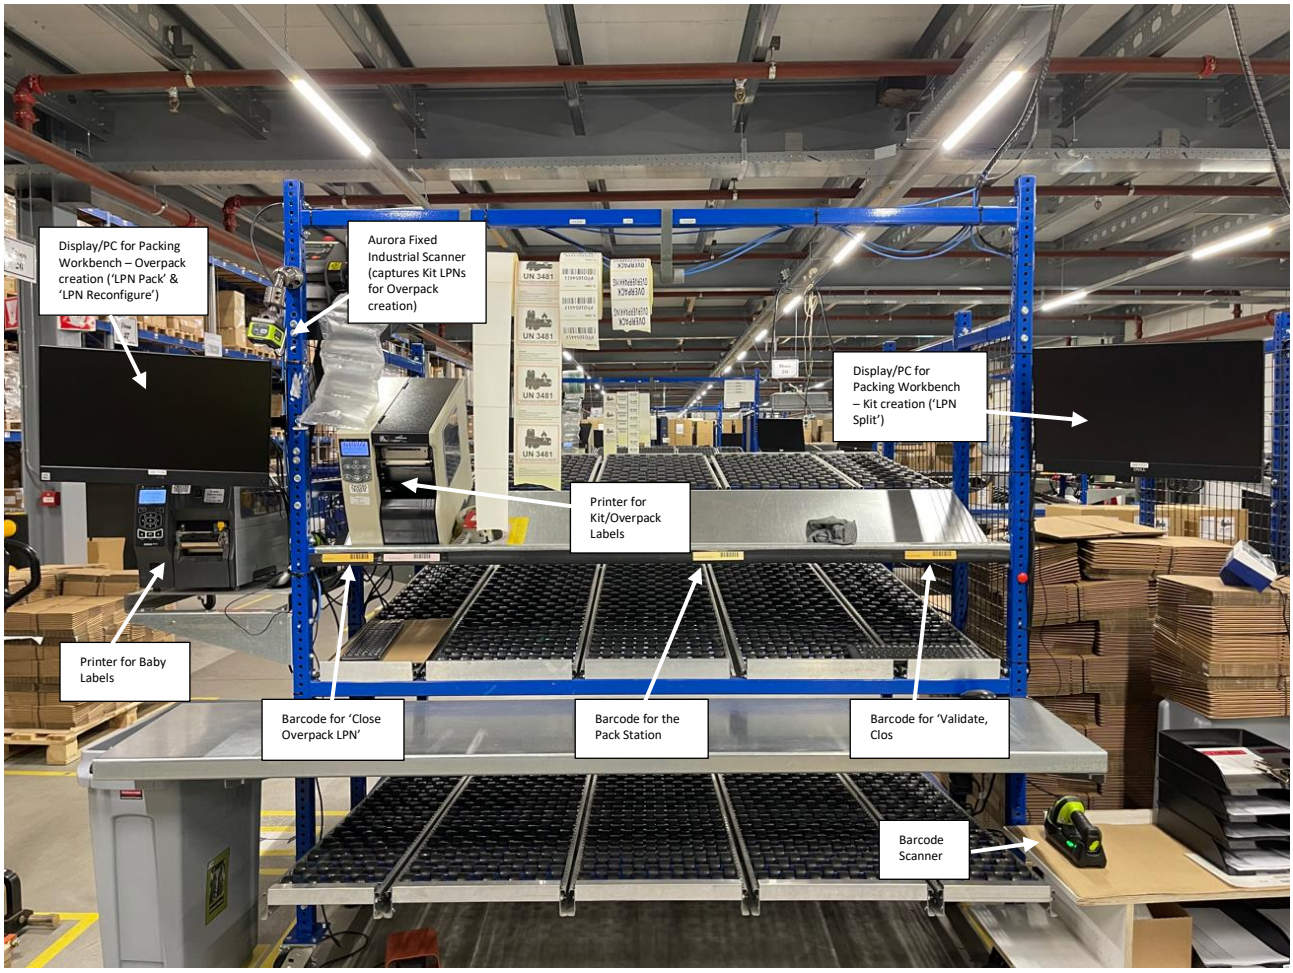
PTO WORKSTATION SET UP

The PTO Kitting process, including the creation of the Overpacks, is done using the Oracle 'Packing Workbench' functionality.
The process has been designed to allow the users to scan barcodes for all the actions they need to do to create a Kit or an Overpack.

Seeing that the entire process is done via scanning, it is required to have the computers enabled for this.

Before you start kitting, please ensure that the file is displayed in your task bar. 
If it is not visible, please click on the shortcut on your desktop to activate it.

The PTO Workstations in Heerenveen are set up as follows:



To use the PTO Packing stations you will also need the following sheets:

- Sheet with barcodes to set up the USB scangun for the Packing Workbench activities:

  Note: All barcodes in each column need to be scanned – from left to right

- Sheet with barcodes for all Oracle actions, for example:
