GTM AES WORKING INSTRUCTIONS

GENERAL OVERVIEW

GTM AES is a Global Trade Management System which is used to process **all International Shipments that required AES filing.** An AES filling is required when one or more HTS code is valued at $2,500. There are 2 types of shipments in GTM that can be filed through GTM AES:

1) Direct non-consolidated customer sales orders where Zebra is the Exporter of Record
2) Offline shipments, which is for items shipped outside the regular Oracle process. These shipments could include returned items to suppliers, overages/shortages of an order, sample items, etc.…

TABLE OF CONTENTS

I) LOG-IN
II) PROCESS
- Search shipments in GTM AES
- Customs Declaration
- AES Validation
- AES Filling

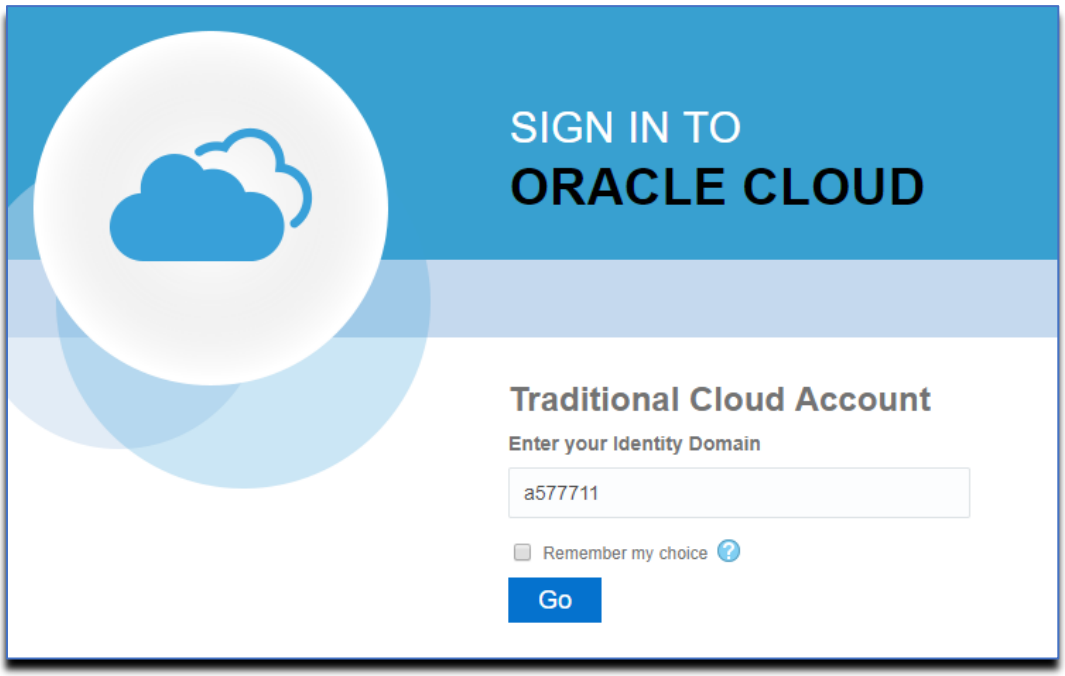
I) LOG-IN

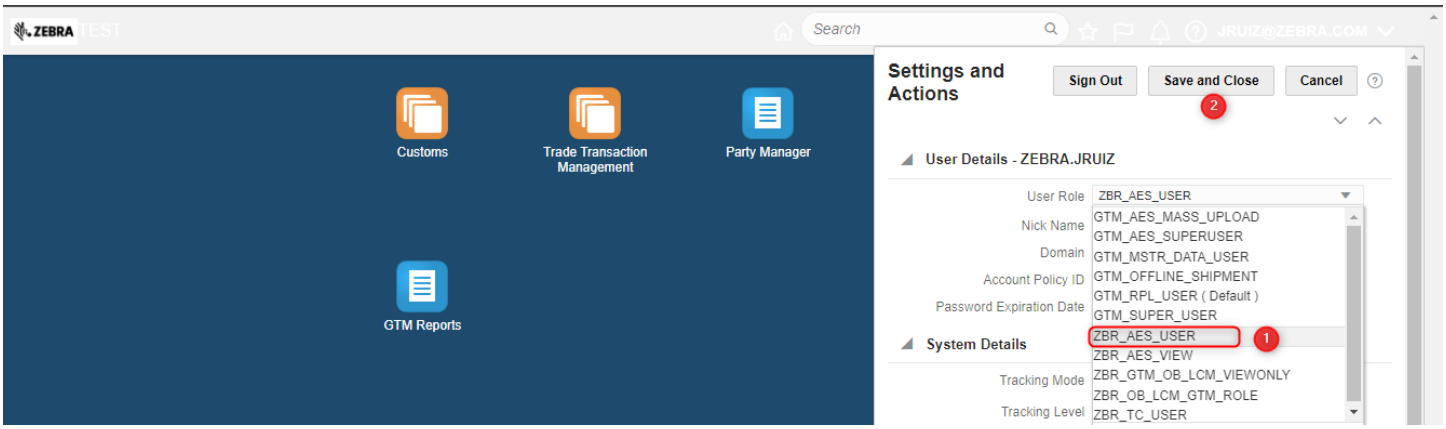
https://otmgtm-a577711.otm.us2.oraclecloud.com

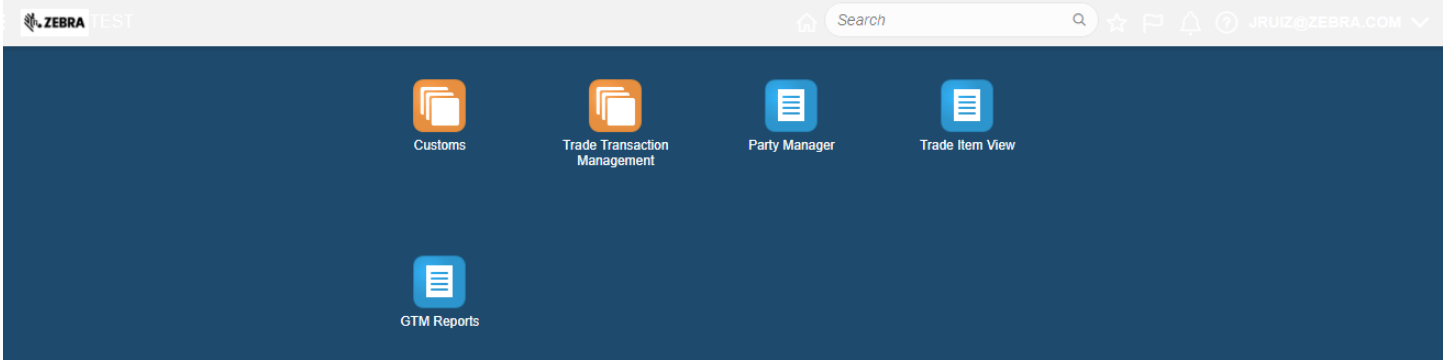


To process a shipment in GTM AES, your profile must first be set to **GTM_AES_USER.**

Instructions

- Click at the drop-down arrow next to your email at the upper right corner of your window browser
- A sub-screen window will open. Within the new window click the drop-down arrow next to your user role
- From the drop-down menu select the “ZBR_AES_USER” role
- The window browser will change to the AES user role and will look like the second screenshot below





II) PROCESS

To start: SEARCH SHIPMENT in GTM AES

Shipment search screen – Customs → Declaration → type in your offline shipment number into Delivery Number field → Search

Note: the only difference for GTM AES filling between Offline Shipment and Sales Orders is the search by the sales order Delivery number. The rest of the steps are the same.

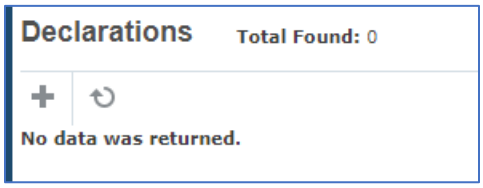
After the search, there are 3 possibilities you will see:

I. No declaration created



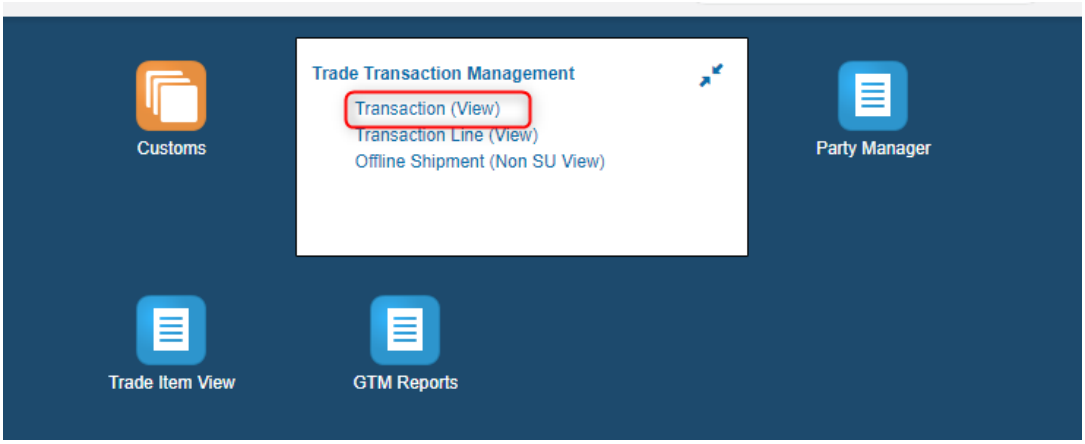
II. Declaration created but not submitted

III. Declaration created and failed validation

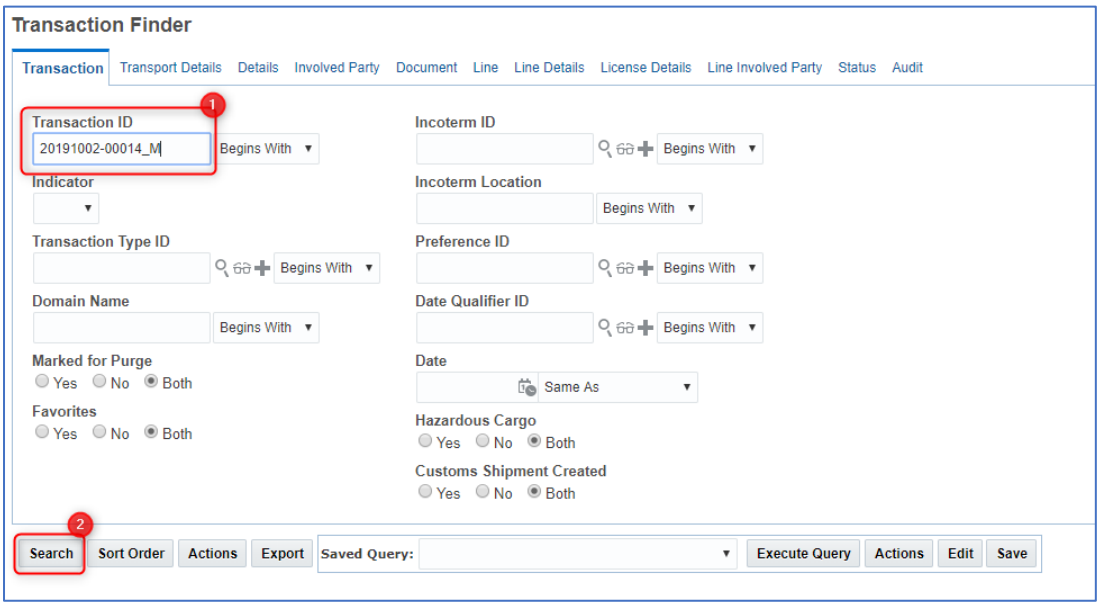
1) NO DECLARATION CREATED

In this first scenario, a GTM AES profile (customs declaration) has not yet been created. The system is set up to automatically create a declaration every 30-min. You can either wait for the system to create it or manually trigger the system following the nest steps.

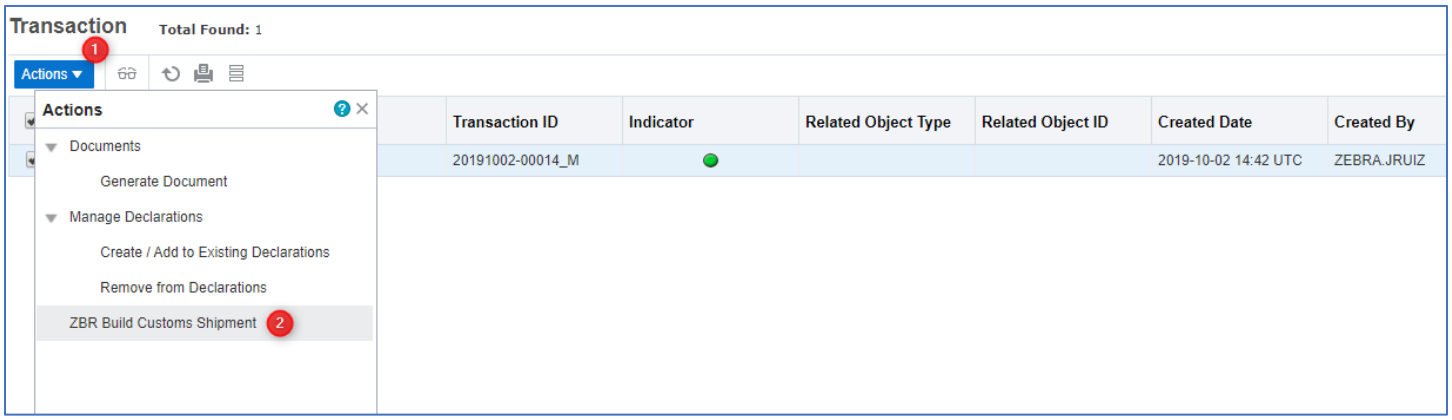
- In the GTM AES home menu go to Trade Transaction Management → Transaction (view)



- Type your offline shipment number in the Transaction ID field and search your shipment



- Your shipment transaction will be displayed. Check the box next to your shipment, select the dropdown menu in "**Actions**", from the submenu select "**ZBR Build Customs Shipment**"



- Your customs shipment will generate, and you can continue with the filling. Follow Customs Validation process

2) DECLARATION CREATED – NOT SUBMITTED

In this first scenario, a GTM AES profile (customs declaration) has already been created. In this case, we just need to fill out the booking details and submit for validation. Follow the steps under Customs Validation

3) DECLARATION CREATED – FAILED VALIDATION

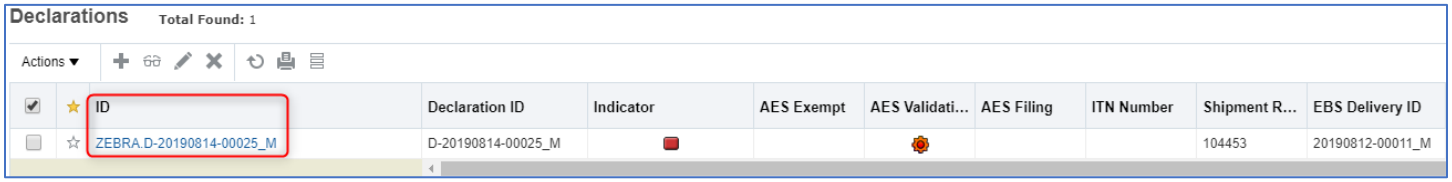
In this first scenario, a GTM AES profile (customs declaration) has already been created and failed validation. In this case, we just need to correct the issues displayed. Most of the times we just need to make sure all of the booking details are filled out. Follow the steps under Customs Validation

CUSTOMS VALIDATION

There are two steps needed to obtain an ITN number in GTM. The first step is to complete the booking information of the shipment and ensuring GTM accepts all information. Once validation is passed then the actual filling happens where GTM connects to ACE and obtains an ITN number. For customs validation follow the next steps.

A) Shipment Declaration

Search shipment → Customs → Declaration → type in offline shipment number under the Delivery Number → select "search". Once the customs declaration is displayed select the "ID" hyperlink to enter the shipment details

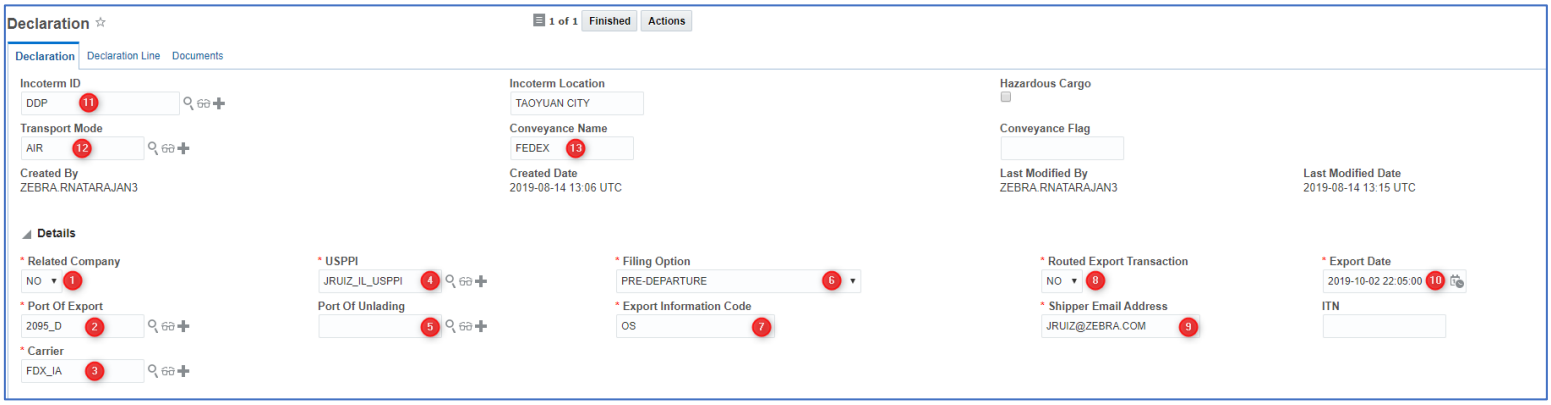


B) Booking Information

Within the declaration the following details will need to be filled out (also referred to as booking information);

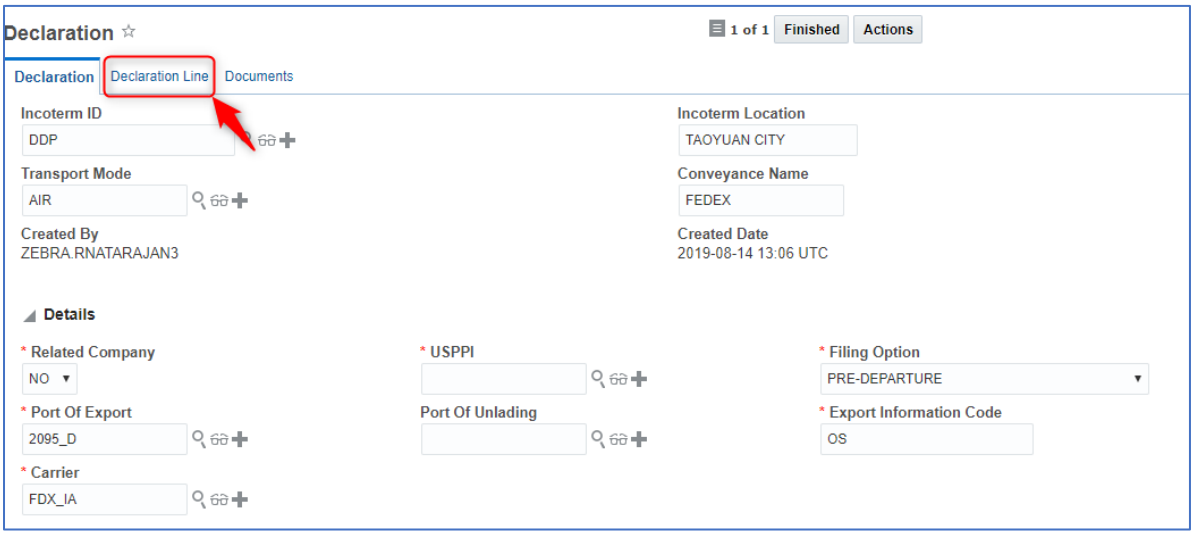
1. **Related Company**: is the ship to a Zebra location? Yes or No
2. **Port of Export**: enter the port of export followed by "**_D**"
3. **Carrier**: enter the three-letter code for the carrier. If the shipment is leaving via air add "**_IA**" at the end. If the shipment is leaving via ground add "**_SC**". Most common carriers for air are FedEx => FDX_IA, DHL => DHL_IA and UPS => UPS_IA.
4. **USPPI**: profiles are predefined under the USA Trade Compliance team members. Please use any of the following: JRUIZ_IL_USPPI, HBROWN_IL_USPPI, MHERNAN_IL_USPPI
5. **Port of Unlading**: this is only needed for ocean shipment or air shipment to Puerto Rico
6. **Filling Option**: should already be predefined to "Pre-Departure"
7. **Export Information Code**: always use "OS"
8. **Routed Export Transaction**: always use "NO"
9. **Shipper Email Address**: your email address. GTM will send a notification with the ITN number or any error messages
10. **Export Date**: date your shipment is leaving

Fields 11, 12 and 13 are pulled from your GTM shipment. However, it is a good habit to check they are filed out.



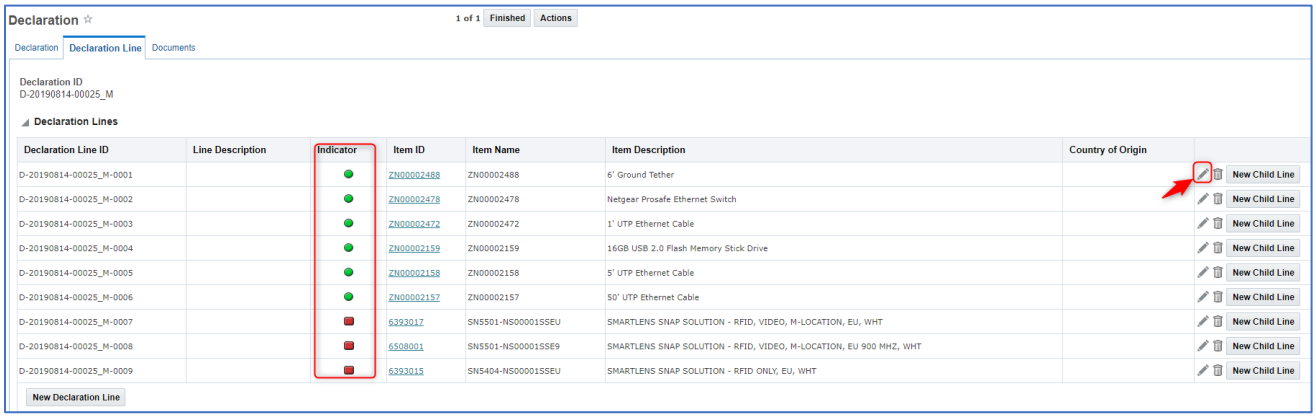
C) Total Gross Weight

Once the booking details are filled out, we need to enter the gross weight for each of your items. Change the screen to see all the line items by clicking on the Declaration Line



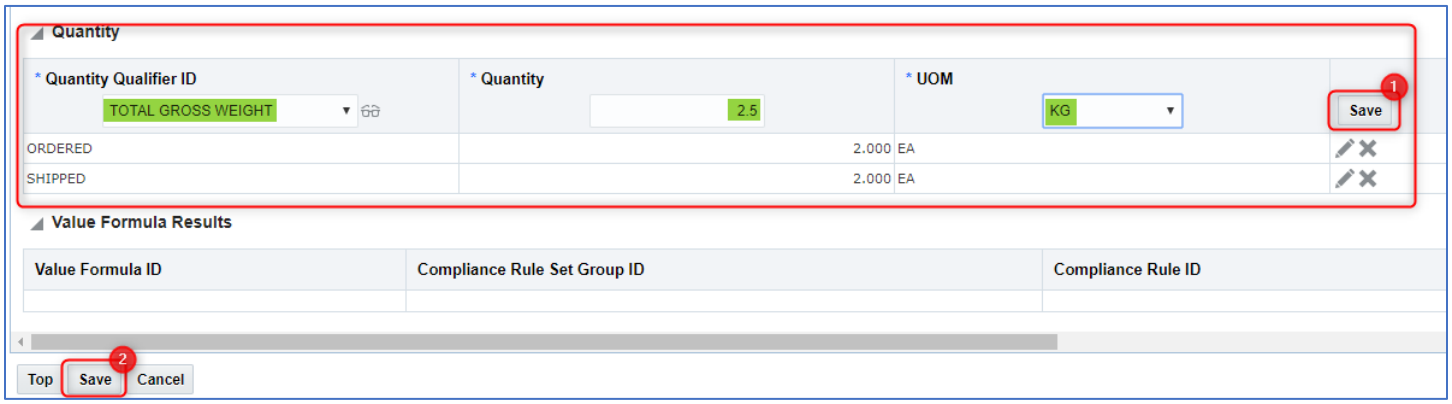
Within the declaration tab, all the line items will be displayed. Click on the pencil icon of each of the line items to enter the weight. DO NOT click on the trash icon as that would delete the line item. If that ever happens contact GTCO.

Note: sometimes you will see the indicator icon as white, green, red or a combination of red and green. These indicators are used to troubleshoot error messages; however, it does not matter for your purpose of entering the gross weight.

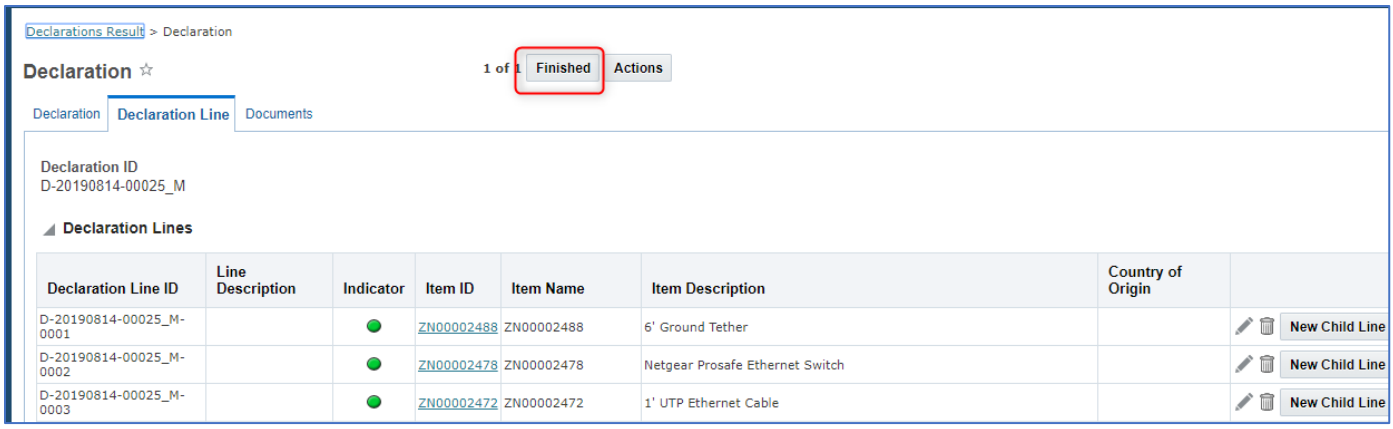


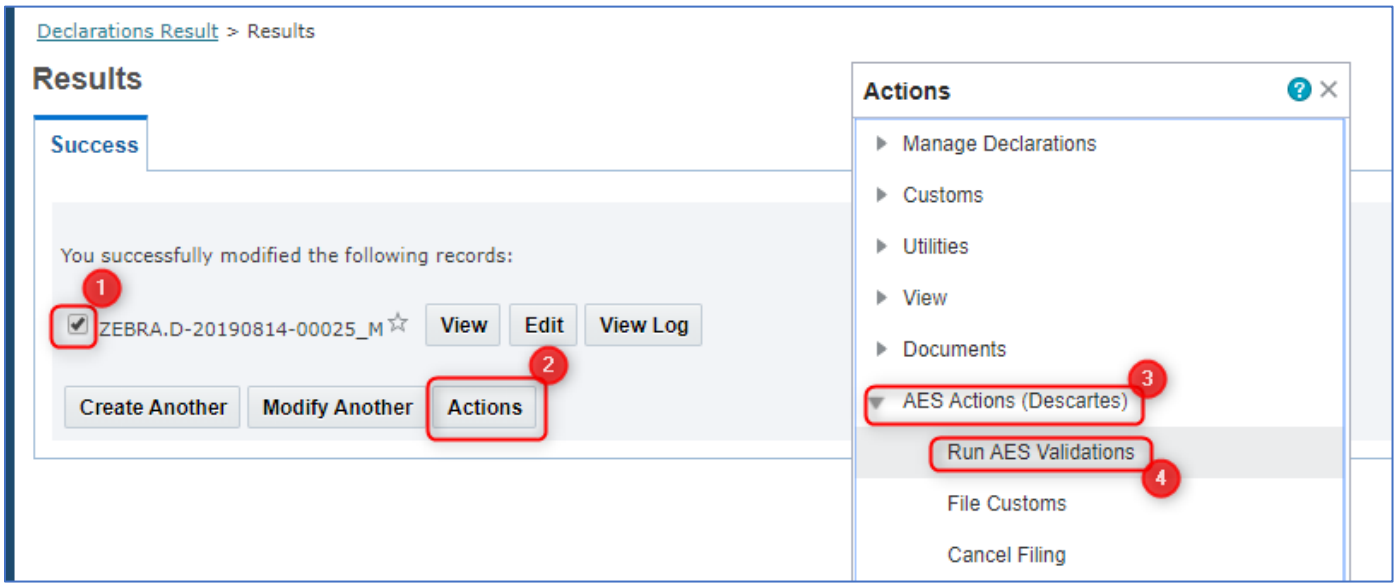
Within the line item, scroll down until you find the QUANTITY section. Select the total gross weight and enter the weight in kilograms. Save the line added and save the transaction at the bottom of the screen. Follow the same step for all the line items

<u>Note: the total gross weight is for the unit weight x the # of units , not the packed weight.</u>
<u>Multiply by the number of units.</u>

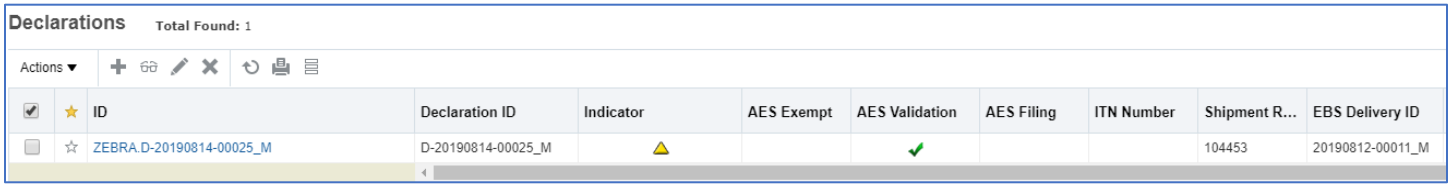


Once the weight has been added to all the lines, save the changes by clicking “Finished” at the top of your screen. Then run the AES validation by selecting the shipment → Click Actions →Select AES Actions (Descartes) → Select Run AES Validation → Return to the customs declaration



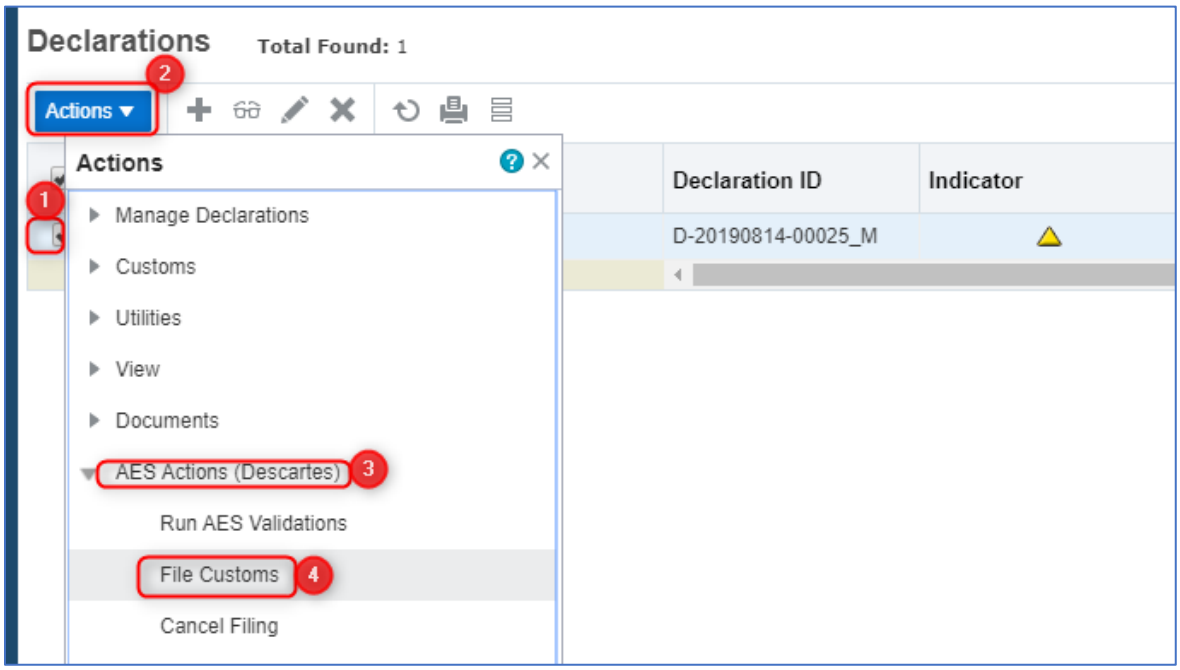


Return to the customs declarations screen. If you see a green checkmark, your shipment is ready to file. If there is a red star, your shipment is not ready to file, and you need to contact GTCO. Response time from GTCO for AES issues is within 2 hours.

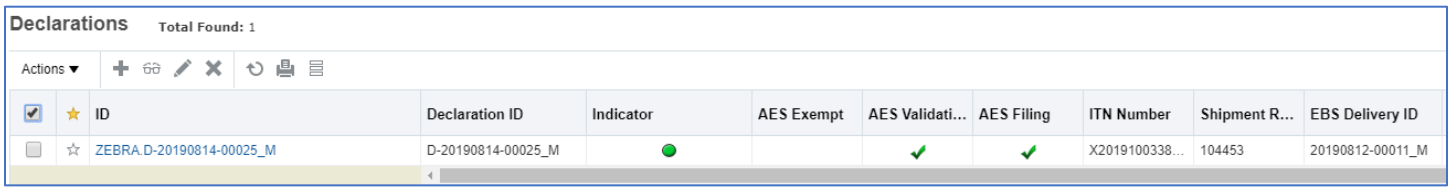


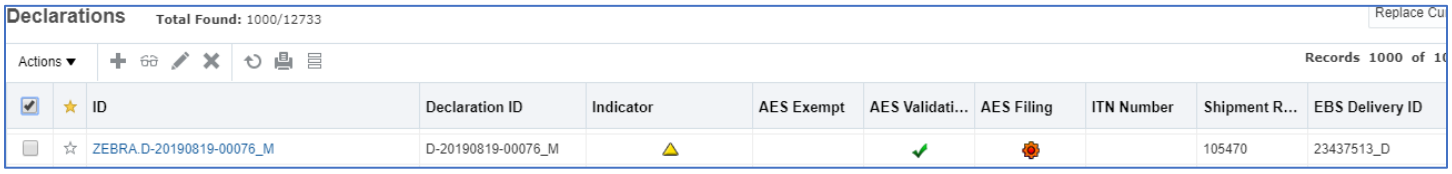
CUSTOMS VALIDATION

When the AES validation has passed your shipment is ready to submit the filling with US Customs. Select the shipment → Click Actions → Select AES Actions (Descartes) → Select File Customs



GTM AES will begin the filling process and you will either receive an ITN number or an error message. If everything goes well an ITN will be displayed, and your filling is now complete. If for some reason the filling fails, then contact GTCO for assistance. Response time from GTCO for AES issues is within 2 hours.





Reach out to GTCO for any questions or concerns regarding GTM AES.

GTCO point of contacts.
Heidi LeBrown – First and main point of contact
Jorge Ruiz – Second point of contact

Additionally, always copy GTCO-NorthAm@zebra.com
