Introduction

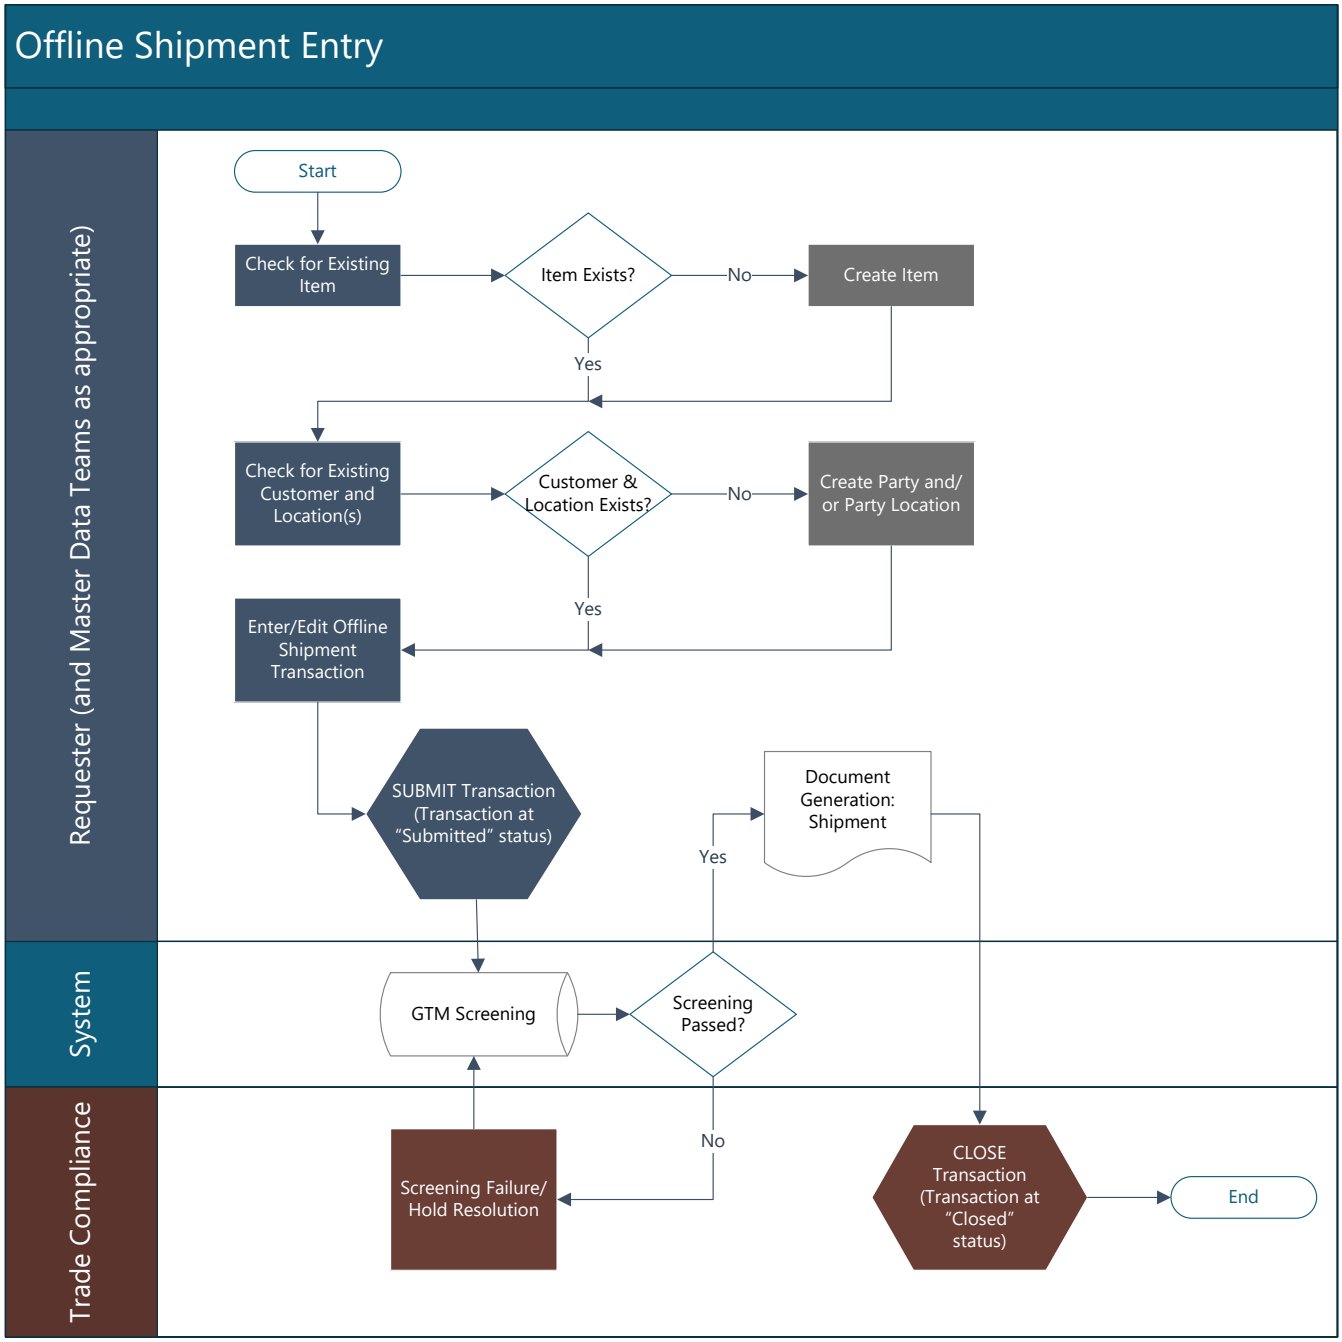
- This training guide is intended to be a reference for Zebra users with GTM_RPL_USER role throughout the Oracle Global Trade Management (GTM) Offline Shipment tool. It will assist you in navigating within GTM to perform tasks associated with generating a manual invoice for international shipments.

- This document assumes the users have been trained or aware of resources available on the company's export compliance practices and offline shipment policies and is not intended to be used as a training document for export compliance or offline shipment processing themselves.

- Online self-paced version of this training guide is available on the Zebra Learning Portal as **Manual Invoice for International Shipment**. Other helpful trainings associated with policy and requirements for international shipments that are available on the Zebra Learning Portal are:
    - Hand-Carry Policy
    - Global Export Guide
    - Global Import Guide

- An earlier version of this document was prepared by Accelalpha team.

Offline Shipment Entry Flow



Navigational Tips

You will be utilizing some common buttons as you work through these steps.

Search/View/New buttons. There are actually 3 buttons on this icon for Finding a value, Viewing a selected record and creating a New record.

Dropdown lists will have a button to launch a list of values:

The Edit button will move the existing entries into the editable fields so you can change them. Be sure to click on the **Save** button at the end of the row.

The Remove button allows you to delete an entry. (No Save command is necessary.)

Throughout GTM you will see indicators on transactions and the Transaction Workbench designed to flag pass and fail screening:

indicators at the transaction header level means the transaction has passed all screening. At the screening type level, it indicate "pass" for that particular type of screening.

indicators mean at least one type of screening failed and there is now a hold on the transaction.

indicator mean that the transaction hasn't being submitted.

GTM Transaction Header and Lines have a status button **Status** which allows users to view the status of the various types of screening performed. Statuses such as Incomplete or On Hold will result on holds on applicable transaction lines. Transactions/lines of Passed are clear for further processing. Unique to Offline Shipments, status TS_OFFLINE_STATUS governs what kinds of activities can be performed at various points in the process:

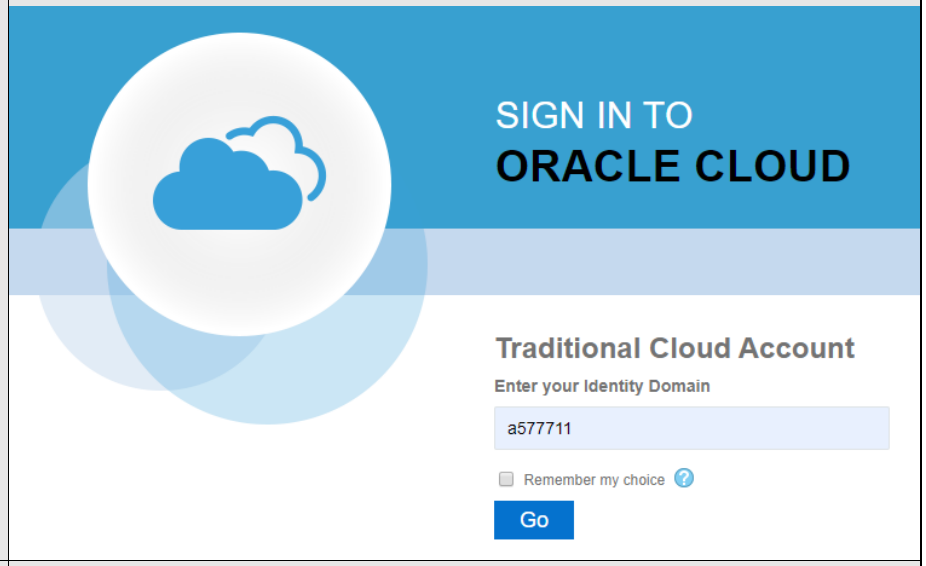
- ENTERED is at the point where the transaction headers and lines are being created and saved
- SUBMITTED is the point at which screening is launched
- APPROVED is the point at which the commercial invoice and pack list will be automatically generated and send to the users email address.
- CLOSED is the point at which any further changes are disallowed (although the Trade Compliance team can re-open a transaction if necessary)

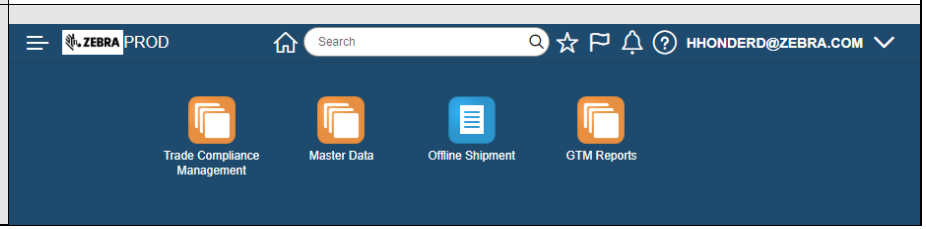
Statuses

Status Type	Status Value
TS_CONTROL_SCREENING	TS_CONTROL_SCREENING_NOT STARTED
TS_OFFLINE_STATUS	TS_SUBMITTED
TS_OTHER_SCREENING	TS_OTHER_SCREENING_NOT STARTED
TS_PRODUCT_CLASSIFICATION	TS_PRODUCT_CLASSIFICATION_NOT STARTED
TS_RPLS	TS_RPLS_NOT STARTED
TS_SANCTION_COUNTRIES	TS_SANCTION_COUNTRIES_NOT STARTED

Log on to Global Trade Management

1. Your User Name and Password are your Zebra network credentials. As long as you are connected to a Zebra network, you should be able to log into GTM automatically. But if prompted, follow the following steps.
2. Enter your User Name in the User Name field.
3. Enter your Password in the Password field.
4. Enter domain: a577711
5. Select **Login**. Oracle will show the GTM home screen.





Offline Shipment Item

Search for Existing Item

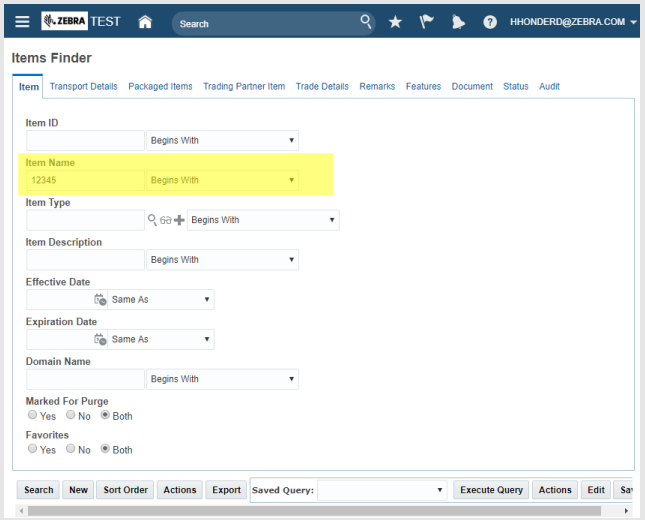
If an item on your Offline Shipment already exists in GTM, then you need not create one manually.

Navigation: Master Data > Trade Item Management > Items

1. Enter the part number in the **Item Name** field.

   Partial entries are allowed. Be sure to select the appropriate qualifier to the right of the field.

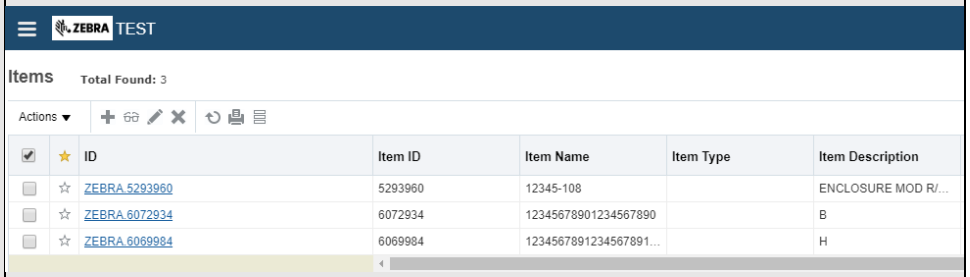
2. Select **Search.**



3. If the system finds one or more matches the next screen will display them. In this case, it may not be necessary to create an item at all.

   Item ID and Item Name are helpful indicators that will be most frequently used.

4. If the system doesn't find any matches, contact Global Trade Compliance Office to manually create the item for you in GTM.



Offline Shipment Party

Search for Existing Party

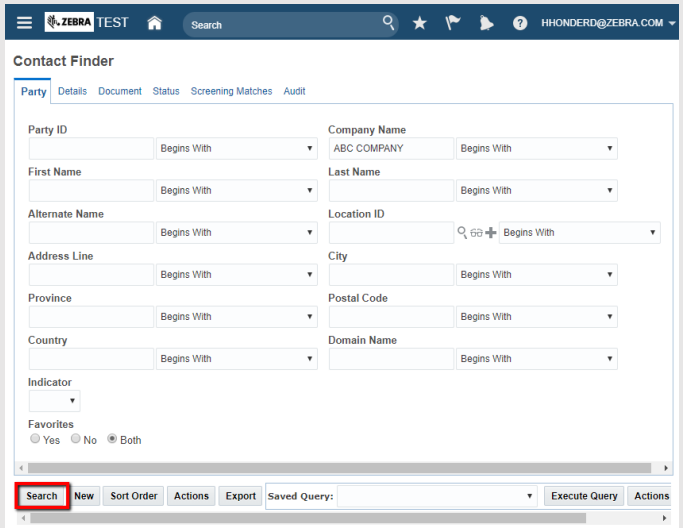
Similar to items, if a Party Location (i.e. Customer Location) on your Offline Shipment already exists in GTM, then you need not create one manually.

Navigation: Master Data > Party Management > Zebra Party Manager

1. Enter search parameters, such as:
   Company Name (if not a person)
   Customer's First and Last names (if a person)

   More selection criteria are available on the **Details** and other tabs.

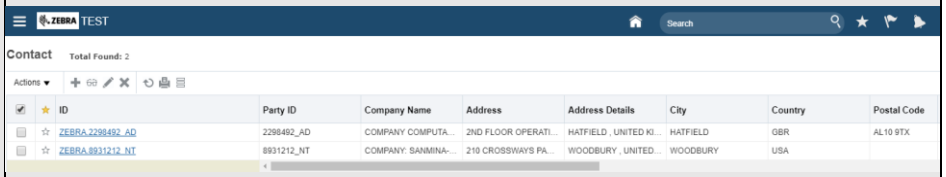
2. Select **Search.**



3. If the system finds one or more matches the next screen will display them.

   Party ID is a helpful indicator that will be used for the offline transactions.

4. If the system finds no matches, contact Global Trade Compliance Office to manually create the party for you in GTM.

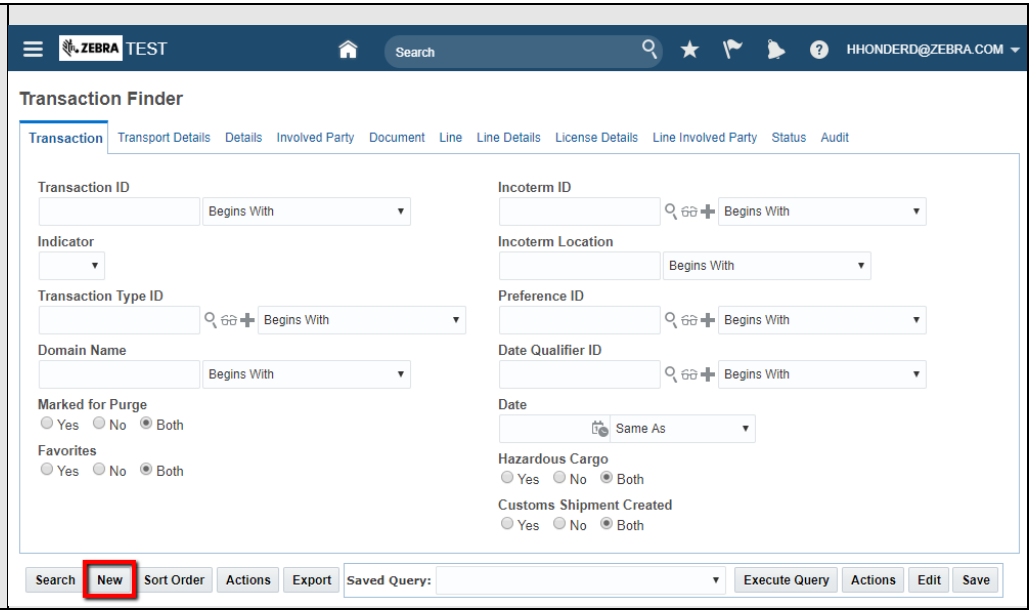


Create Offline Shipment Transaction

Now that we have our items and party/party locations available, we can enter our Offline Shipment Transaction.

Navigation: Offline Shipment

1. Select **New** to launch the Offline Shipment entry screen.



2. Within the Transaction tab, header area, there are several fields to be completed:

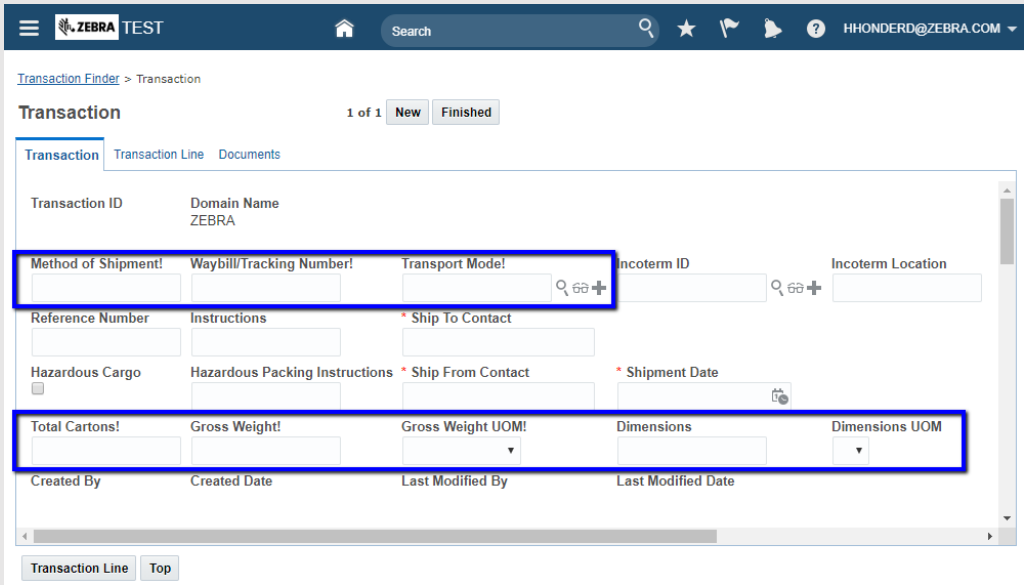
   a. Mandatory fields are indicated by a red asterisk. Mandatory fields are required to be completed before navigating to Transaction Line and are critical attributes for compliance screening.

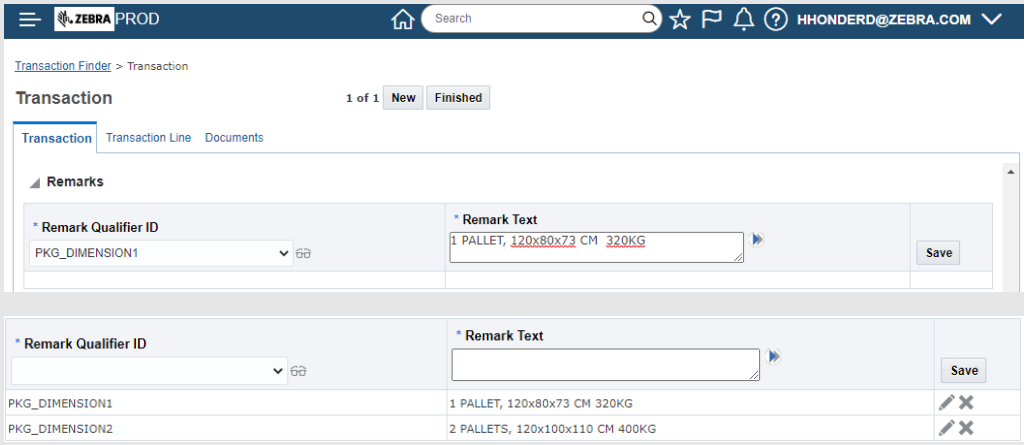
   b. Fields in blue box can be completed when available. These are not system screened and will not prevent user from submitting the transaction for compliance screening. However, they are fields mapped to the shipping documents and it's strongly advised to complete them.

   c. "**Reference Number**" and "**Instructions**" fields are optional. These are not mapped to print on shipping documents, unless populated.

   d. "**Hazardous Cargo**" check and "**Hazardous Packing Instructions"** are not mapped to print on shipping documents yet. If you have a Hazardous Cargo/Dangerous Goods item/Battery, you are asked to complete the Dangerous Goods Declaration section explained further below.

   e. **"Total Cartons"**, **Gross Weight!, Gross Weight UOM!**, **Dimensions** and **Dimensions UOM** fields are optional. Use PKG_DIMENSION# and complete the "**Remark Qualifier ID**" in the Remarks section, when the dimensions of multiple packaging (other than one Carton) are required to print. These are not mapped to print on shipping documents, unless populated.

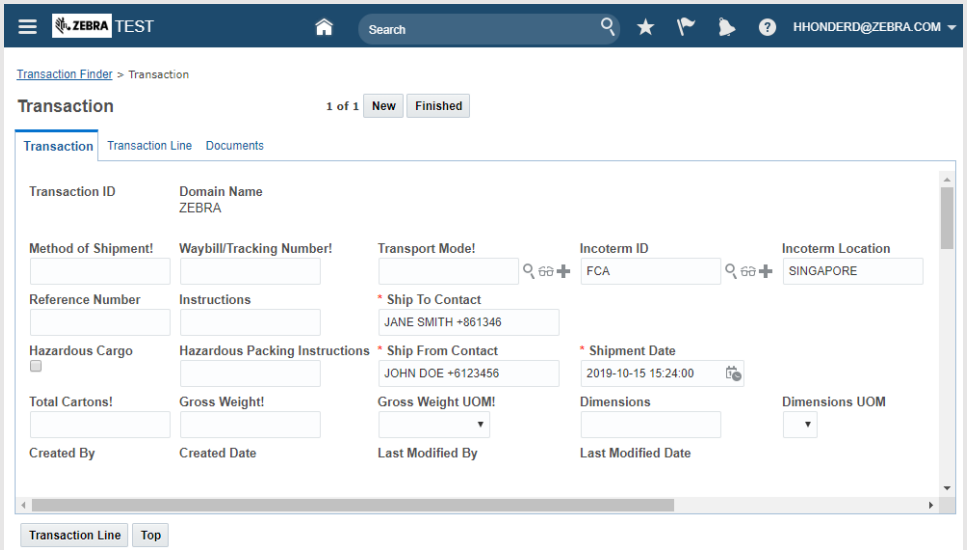




3. Completing the mandatory fields:
    a. INCO Terms and INCO Term Location
    b. Ship To Contact Name and Ship From Contact Name*: Enter Name and Phone Number
    c. Shipment Date

    *Entries in these Ship To and Ship From Contact fields are text only and regraded as the Attention To contacts.

    These entries will not be screened against restricted parties list (RPL). If RPL screening is required, the persons need to be set up as parties and entered in the Involved Parties section below in addition to the customary SHIP_FROM, SHIP_TO, BILL_TO addresses.

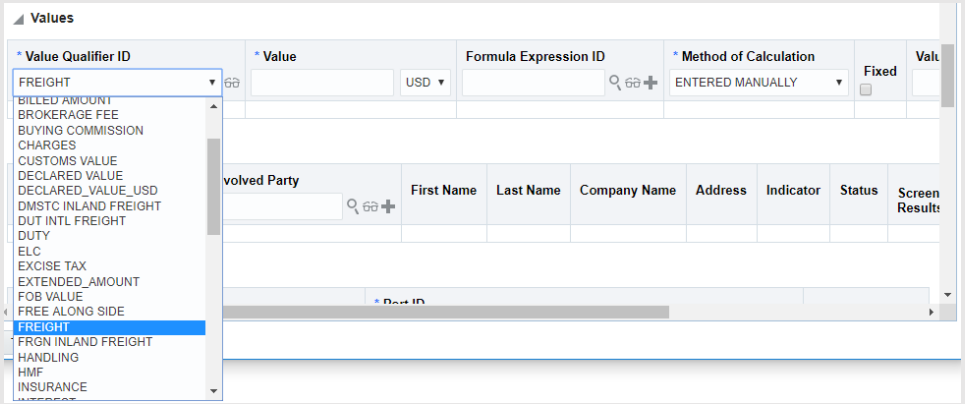


4. Value Qualifier ID

    d. At this time, only FREIGHT value is mapped to the shipping document.

    e. If you are aware of FREIGHT value to reflect on the invoice, select FREIGHT and enter the freight value and select applicable currency. Be sure to Save your entry.

    f. Otherwise you can leave this section blank.



5. Involved Party Qualifier ID

   a. Make entries for SHIP_TO, BILL_TO and SHIP_FROM party qualifier ID's.

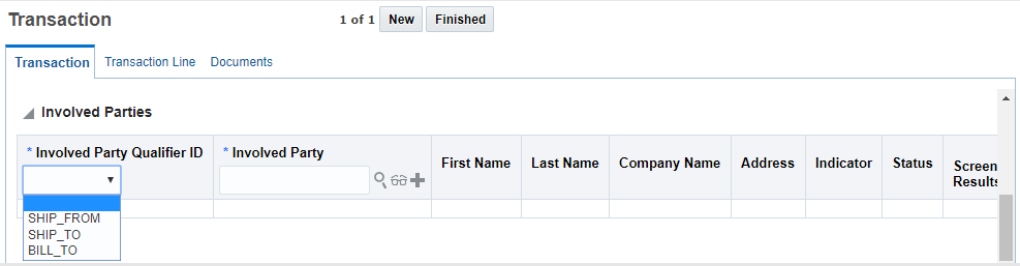
      i. **NOTE:** party selected as the BILL_TO will appear on the shipping documents as IMPORTER. Please make sure to enter the importing party: offline shipments are Free of Charge Shipments with no billing involved.

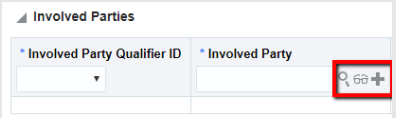
   b. Using the Navigational button, find the corresponding Party ID: Find function is advised to be used.

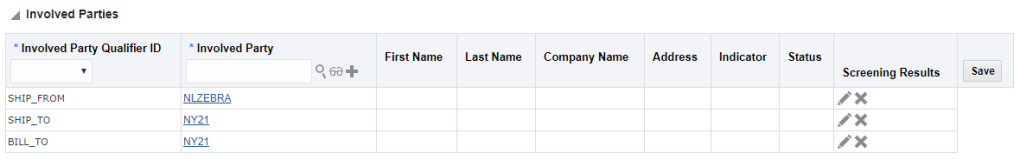
      i. As in the previous section of "Search for Existing Party", find the corresponding Party ID.

      ii. If you already have your Party ID, you may enter it right away.

      iii. Be sure to select **Save** after each entry.







6. Port Qualifier ID

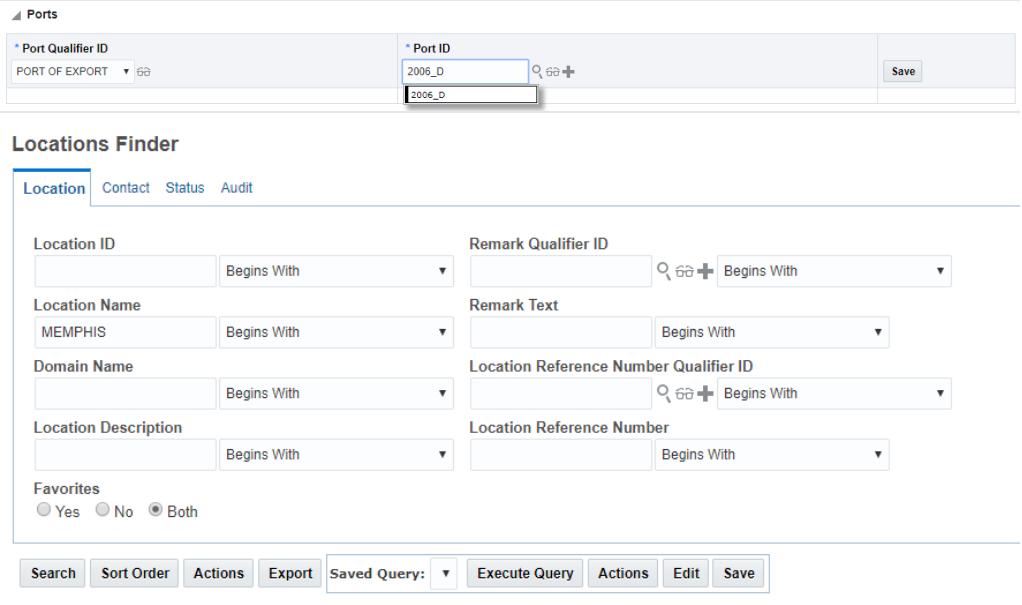
   Port of Export is mandatory for shipment out of US only.

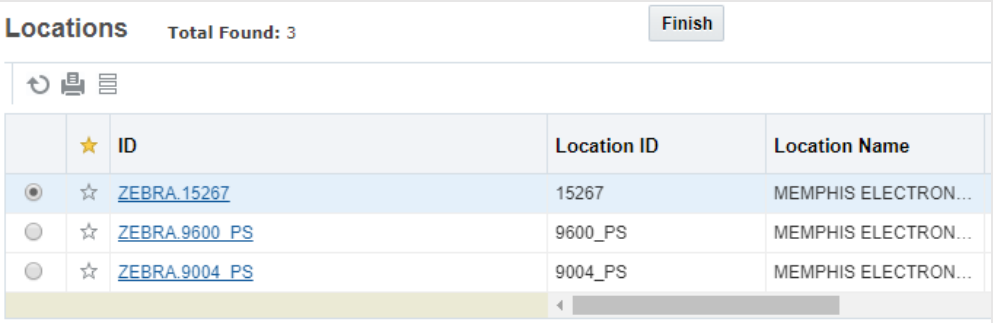
   a. If you already have your Party ID, you may enter it right away.

   b. Otherwise, using the Navigational button, find the corresponding Party ID: Search function is advised to be used.

      i. Enter your port location in the Location Name field.

      ii. Port IDs end with "_D"

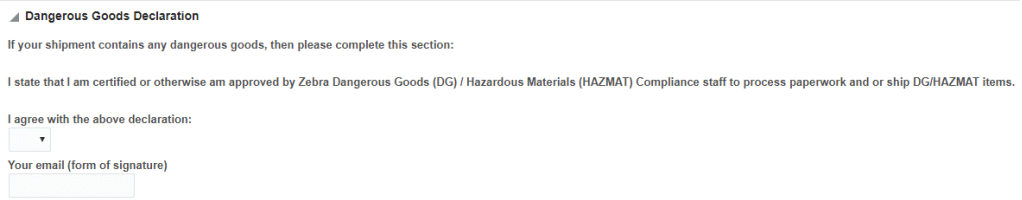




7. Dangerous Goods Declaration

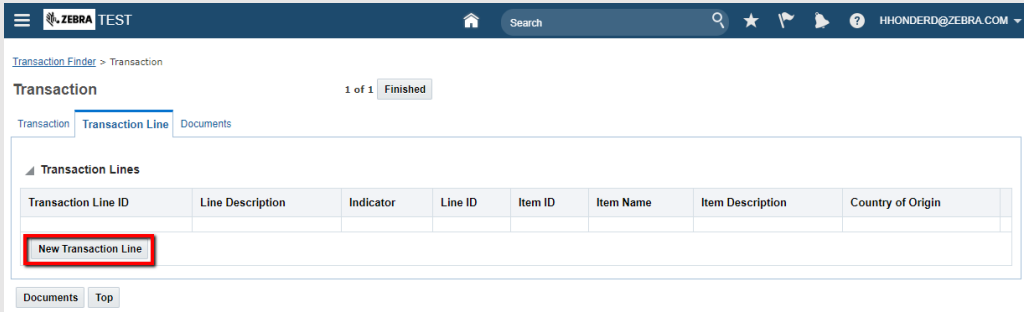
   a. If you are aware of the dangerous goods items in your shipment, you can complete this section.

   b. If you not aware of dangerous goods items in your shipment, you can disregard this section. System will flag the shipment, if necessary.



8. Once transaction header level information is completed, click Transaction Line at the bottom of the screen.

9. Select **New Transaction Line** button.

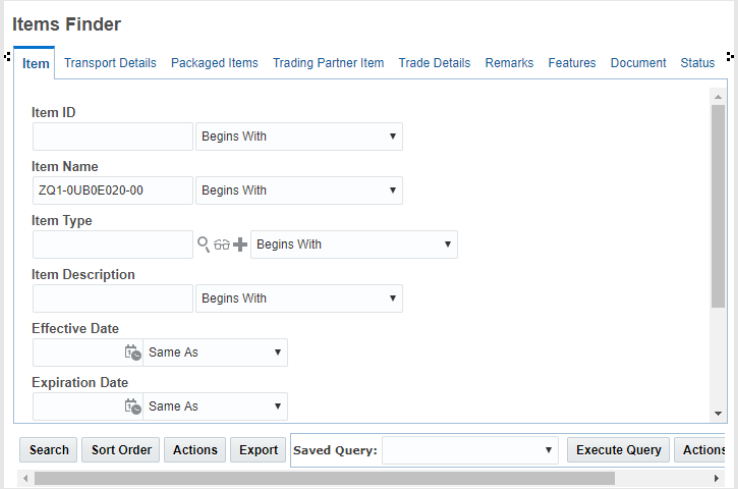


The Item ID field requires the database Item ID, not the Item Name (or part number). As in the previous section of "Search for Existing Item", find the corresponding Item ID by utilizing the Navigational button: Find function is advised to be used.

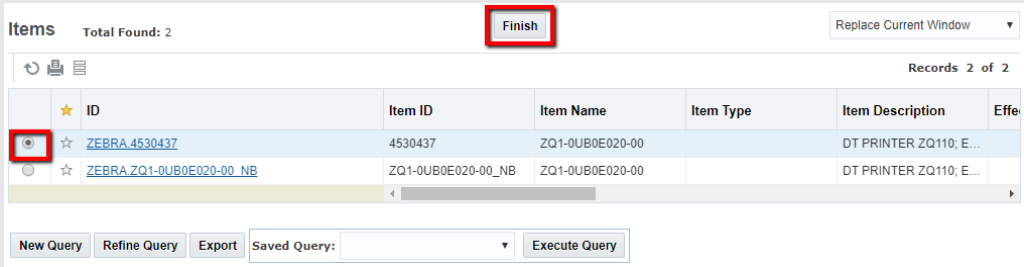
10. Select the **Find** button to the right of the Item ID entry field to launch the Trade Item Finder screen.

11. In the Trade Item Finder screen, enter the part number in the Item Name field (partial strings will work).

12. Select the **Search** button.



13. GTM displays a list of matching values.
14. Use the horizontal scrollbar as needed to see more information on the item to assist in selection of the correct item.
15. Select the radio button next to the desired item and select the **Finish** button.



16. GTM returns you to the Transaction Line screen. The Item ID is now selected for you.

17. Select a Country of Origin from the list of values. To find a country's code, you may use the **Find** function.

    NOTE: The form is designed to handle only one Country of Origin per transaction line. If you have the same item of multiple Country of Origin, create multiple transaction lines.

18. Enter the Declared Value (customs value) and select its Currency.

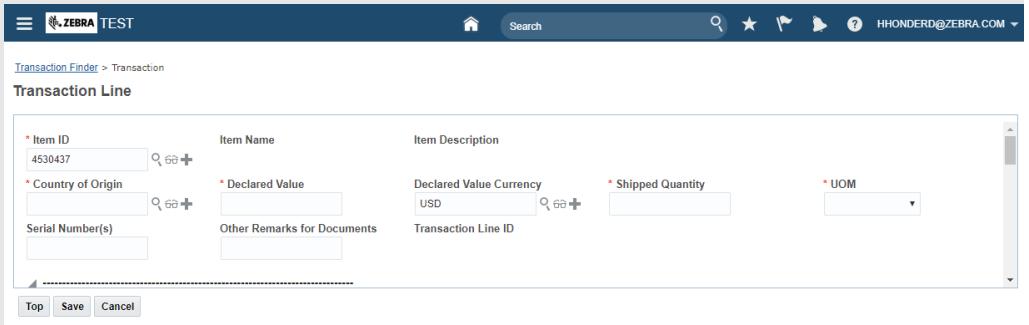
19. Enter the Quantity to be shipped.

20. Select the Unit of Measure (UOM) for the Shipped Quantity (e.g. EA).

21. Optionally enter Serial Number(s), if applicable.

22. Optionally enter remarks for that transaction line.

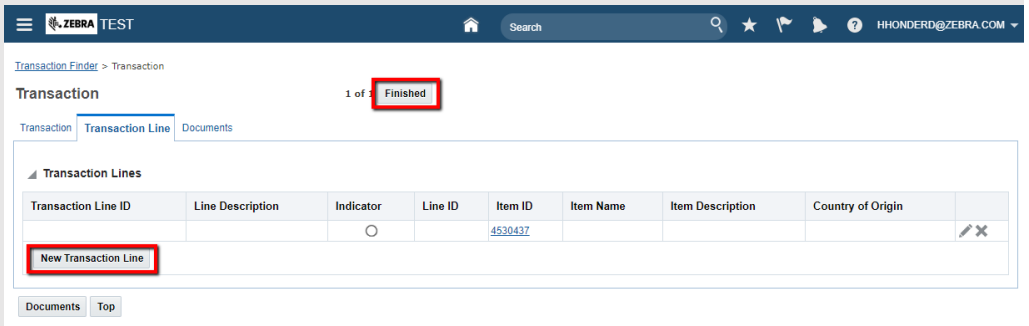
23. At this point, all entries for the line are complete. Select the **Save** button at the bottom of the screen.



24. GTM returns you to Transaction Lines tab.

25. If there are more lines to enter, select the **New Transaction Line** button and repeat the instructions above. *

26. If you are finished with your line entries, select the **Finished** button.

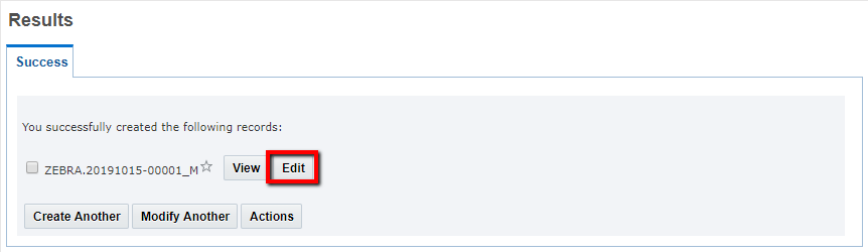


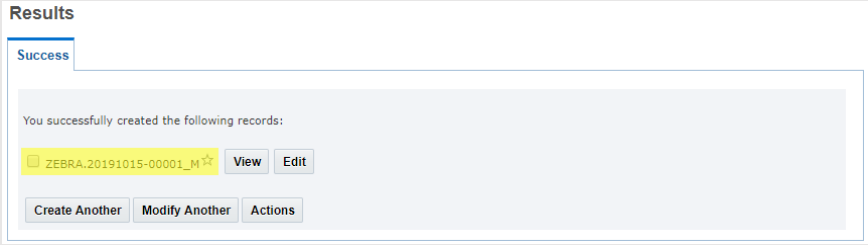
***Hint:** If adding several lines, it is recommended you select **Finished** after entering each line. Then open the transaction once more to add the next line. **If you close the screen by**

mistake without selecting "FINISHED", you will lose unsaved entries.

27. After selecting **Finished** the system displays a confirmation window where you can select the **Edit** button to return directly to the transaction without navigating back to the Transaction Finder screen.

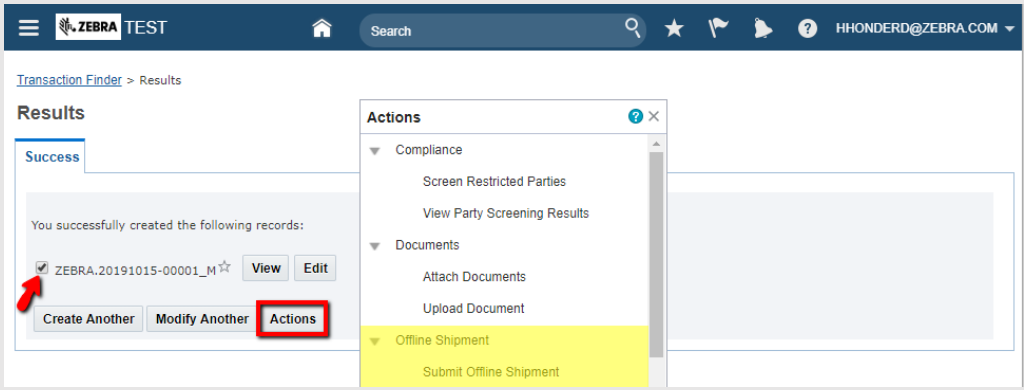
    NOTE: The shipment number / transaction number is displayed as Transaction ID. You will need this to query your transaction.



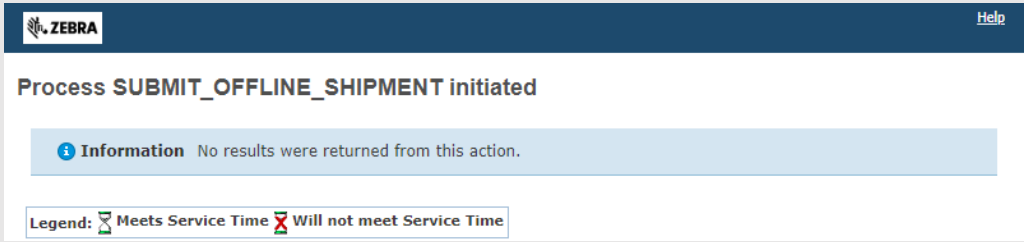


Submit Offline Shipment Transaction

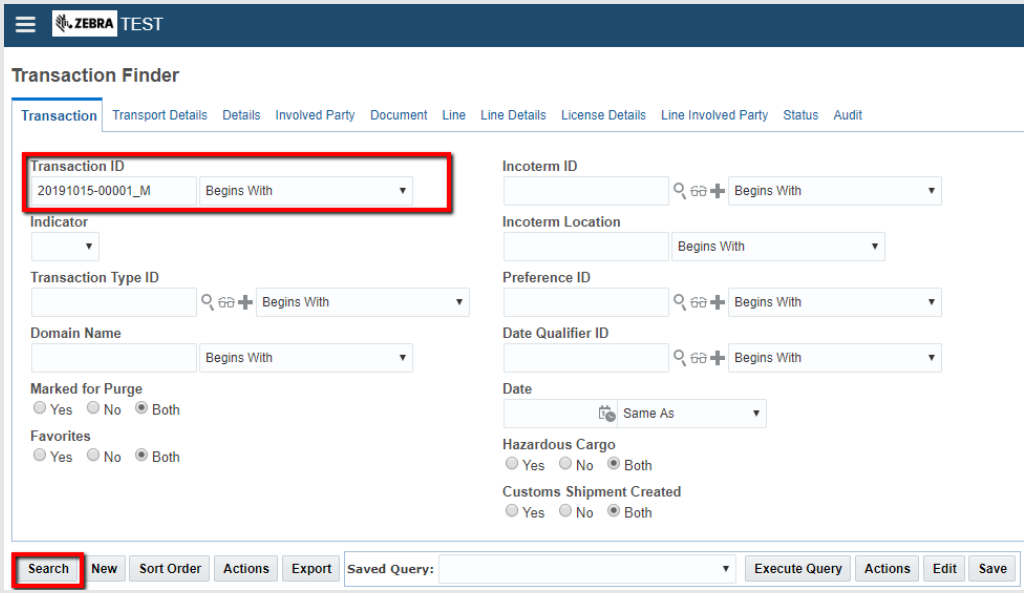
1. After creating the transaction, you must SUBMIT it to commence screening. Select the **Actions** button (top of the screen), and select **OK** in the pop-up message window.
2. Under the Offline Shipment submenu, select the **Submit Offline Shipment** link.



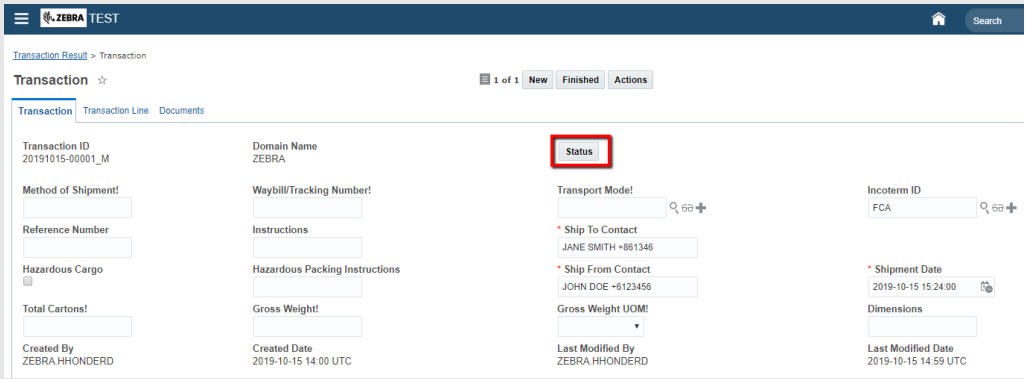
3. GTM displays a confirmation window. You can close this.



4. From the Offline Shipment menu, query your transaction from the Transaction Finder Screen to see the screening results.



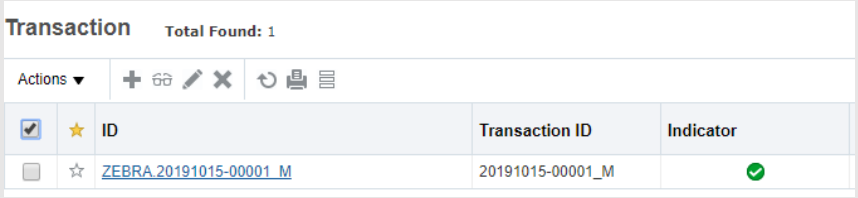
5. Select the **Status** button on the header.

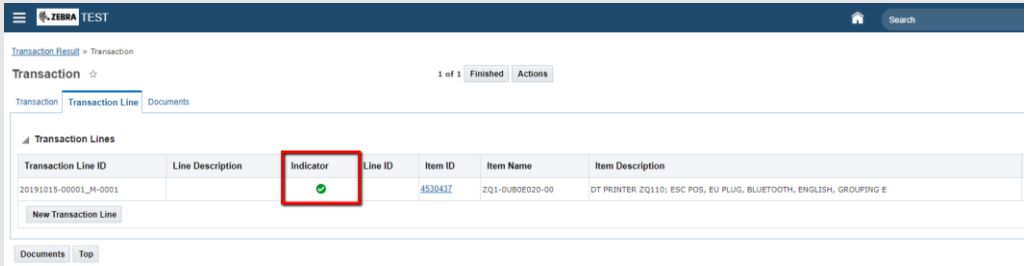


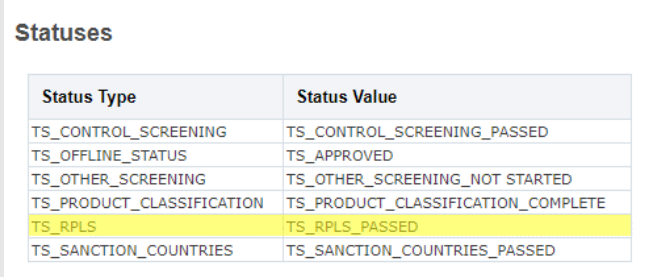
6. If all compliance screening is complete and status is PASSED, a green indicator will appear on the Transaction Result screen.

   On the Transaction Line tab, all lines will have a green indicator as well.

   The transaction status will be TS_APPROVED and user can proceed to print the shipping documents.







Statuses

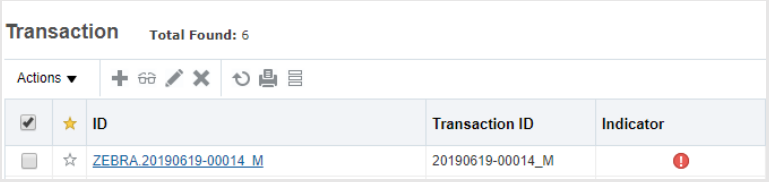
Status Type	Status Value
TS_CONTROL_SCREENING	TS_CONTROL_SCREENING_PASSED
TS_OFFLINE_STATUS	TS_APPROVED
TS_OTHER_SCREENING	TS_OTHER_SCREENING_NOT STARTED
TS_PRODUCT_CLASSIFICATION	TS_PRODUCT_CLASSIFICATION_COMPLETE
TS_RPLS	TS_RPLS_PASSED
TS_SANCTION_COUNTRIES	TS_SANCTION_COUNTRIES_PASSED

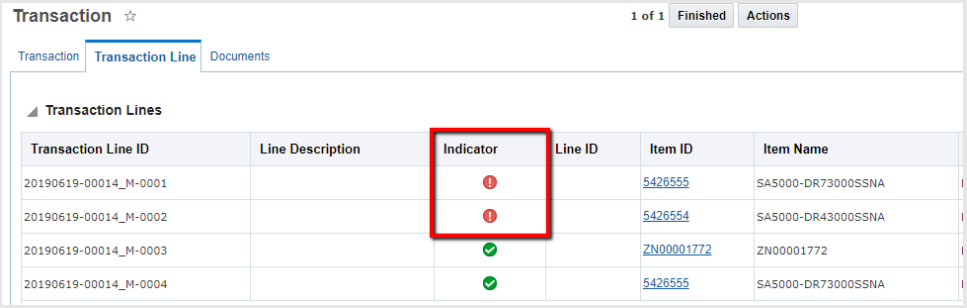
7. If any transaction lines have FAILED compliance screening, there will be a red indicator on the transaction result tab.

   On the Transaction Lines tab, you will see red indicators on the lines requiring attention.

   If transaction has a trade compliance hold, the transaction status will be TS_OFFLINE_STATUS displays at status of TS_SUBMITTED.

8. While the transaction will appear on the Trade Compliance Team's Transaction Workbench, notifying the Trade Compliance Team can ensure prompt action.



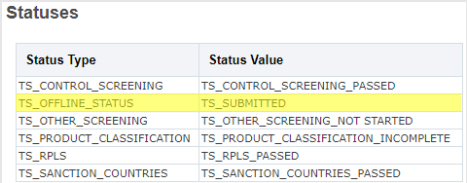


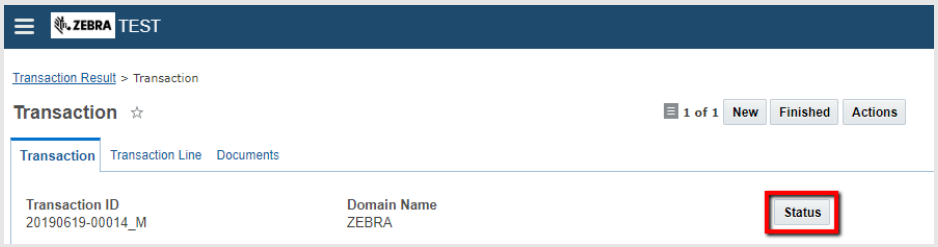
9. In order for users to generate shipping documents, it will be necessary to have the status to "APPROVED" on the transaction.

10. To check your transaction status, select the **Status** button on the header.

11. The transaction status TS_OFFLINE_STATUS displays at status of "TS_APPROVED".

12. The transaction is now eligible for generation of the Commercial Invoice (exports) and Pack List.





Find and Update Offline Shipment

Often it will be necessary to retrieve your Offline Shipment transaction in order to makes updates or to make corrections, add new lines, remove lines, etc. Once your edits are complete, you must SUBMIT your transaction for compliance screening to commence.

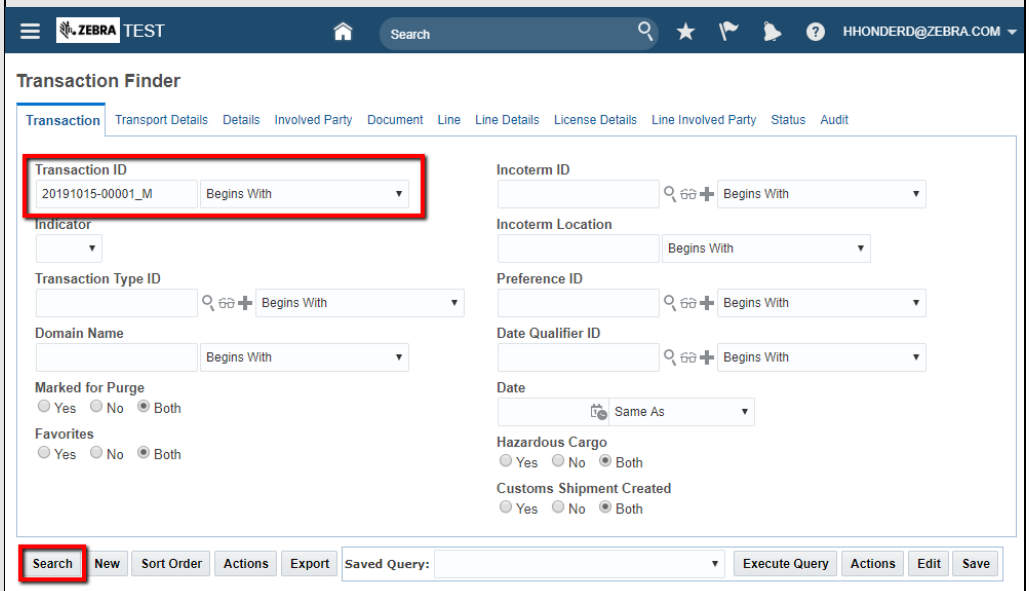
In order to update your Offline Shipment (i.e. for shipping method, waybill, etc.) it will be necessary to update your transaction.

Navigation: Offline Shipment

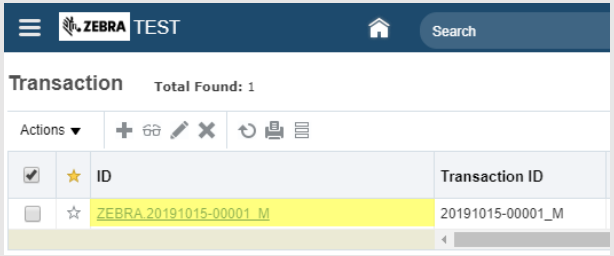
1. Optionally enter your Offline Shipment transaction ID in the Transaction ID field. You can enter partial strings to narrow your search.

   Notice other tabs are available (Details, Involved Party, etc.) to enter more search criteria such as Item ID or an Involved Party if you do not remember your shipment ID.

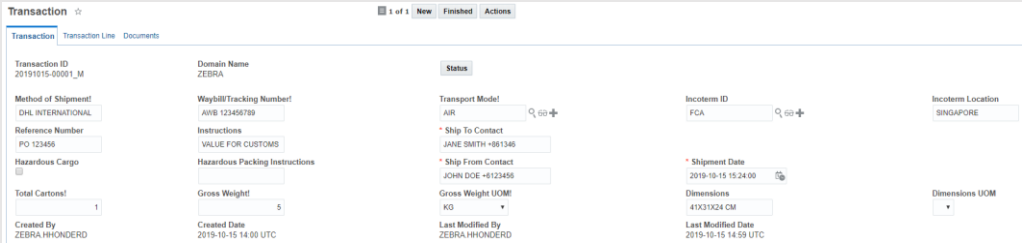
2. Select **Search**.



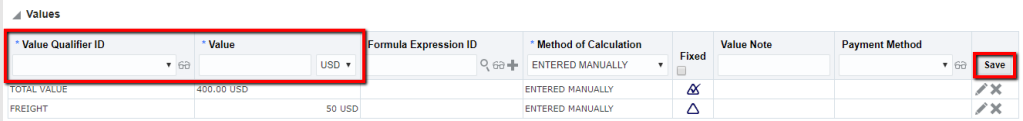
3. GTM displays a list of any/all Offline Shipment transactions that match your search criteria. Select the link under the ID column for the desired transaction to open and edit.



4. This example shows shipment information that can now be entered. Enter the following:
    a. Method of Shipment
    b. Waybill or Tracking Number
    c. Total Number of Cartons, Gross Weight and Gross Weight Unit of Measure
    d. Dimensions and Dimensions UOM



5. Scroll down to the Values section to optionally enter a Freight Cost as follows:
    e. Value Qualifier ID: Select “FREIGHT”
    f. Value: Enter the value and select a currency.
    g. Select the **Save** button.

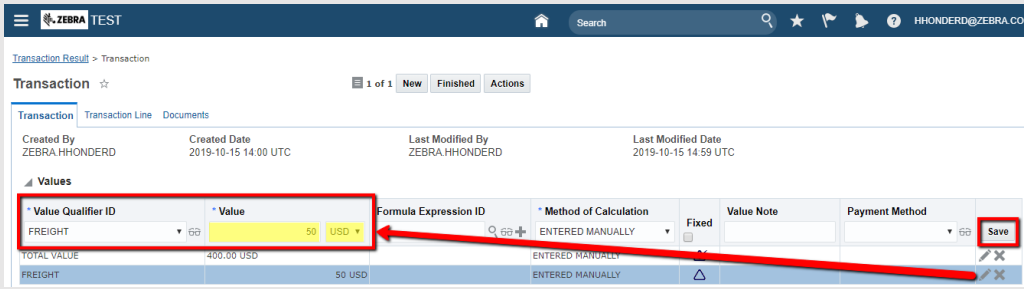


6. You can make changes any of the other values you already entered, such as Involved Parties.

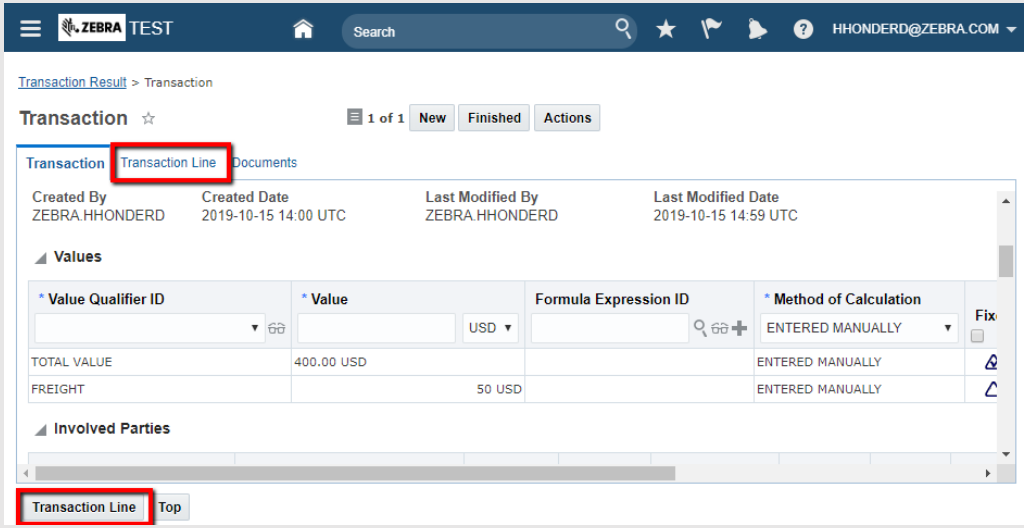
    h. If you do not see the edit icons ( ) you can edit the field directly.

    i. Use the cross icon to REMOVE an entry.

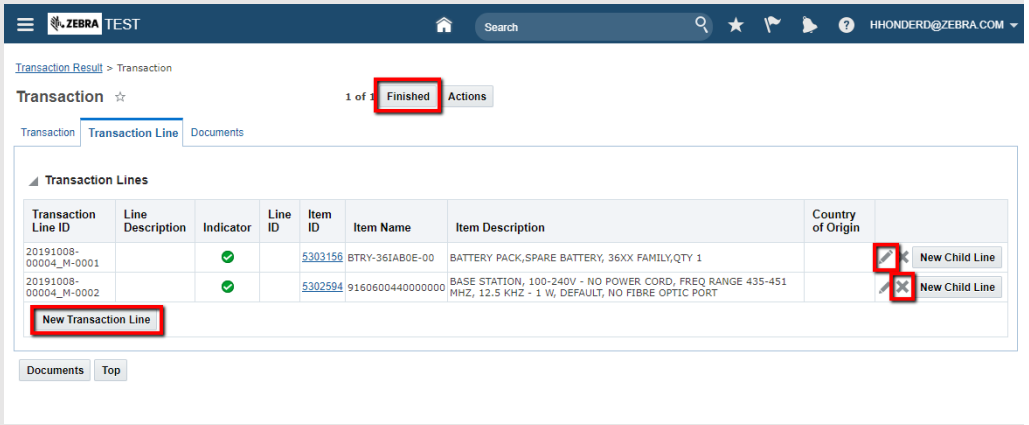
    j. Use the pencil icon to EDIT an entry. Clicking on the icon moves your data to the white entry fields where you can edit and SAVE once more.



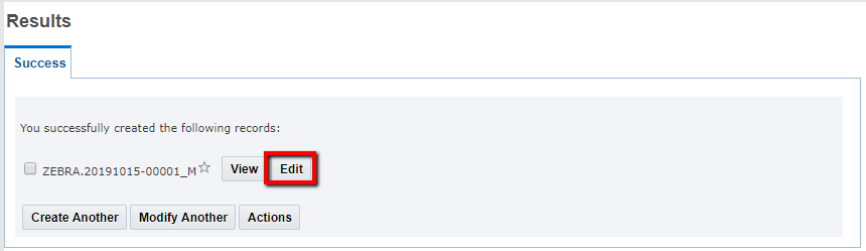
7. For edits to the Transaction Lines, select the Transaction Line tab or button. This takes you to the list of existing lines on your transaction.



8. Select the **New Transaction Line** button to add a new line. (Review the previous section for entry steps.)
9. Select the pencil icon to edit an existing line (i.e. change quantity/declared value or add a remark, etc.)
10. Use the cross icon to delete a line.
11. Select the **Finished** button to save all your changes.



12. GTM displays a confirmation screen.
13. Once your edits are complete and saved to the database, you must SUBMIT it to commence re-screening. Select the **Edit** button from the confirmation screen to return to the transaction. Refer to “Submit Offline Shipment Transaction” section.



Generate Offline Shipping Documents

Once all compliance screenings are complete, and any holds are resolved, and status of the transaction is TS_APPROVED, the transaction is now eligible for generation of the Commercial Invoice (for exports) and Pack List. The generation of the Commercial Invoice (for exports) and Pack List is automated since July 2022. The offline shipment creator will receive the documents by e-mail for each transaction created. The latest revision of the document will be sent to OnBase this occurs once the status of the offline shipment is TS_CLOSED.

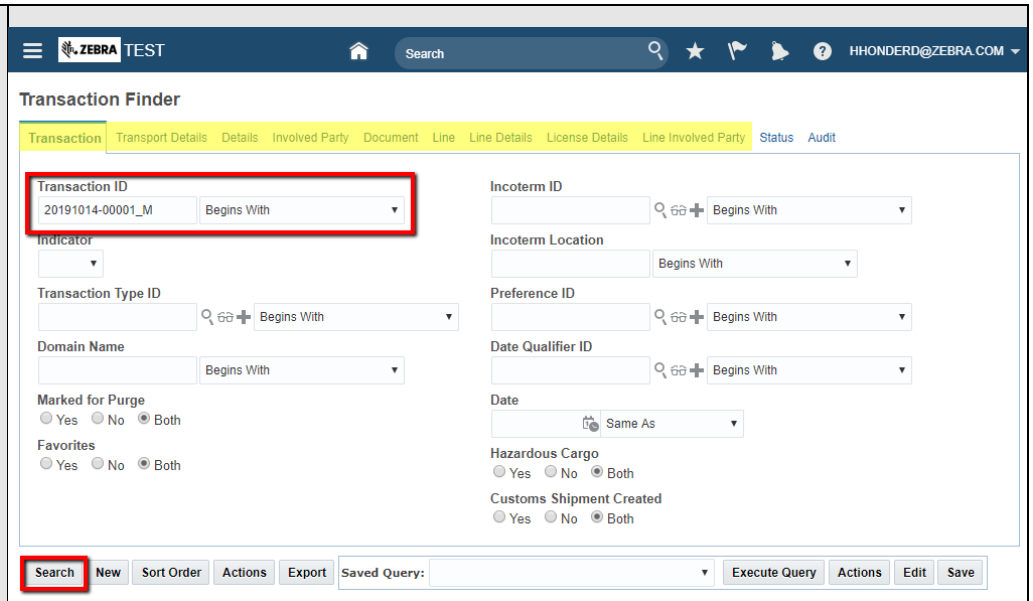
Navigate to the Offline Shipment menu item and use the Transaction Finder screen to find and open your transaction.

Navigation: Offline Shipment

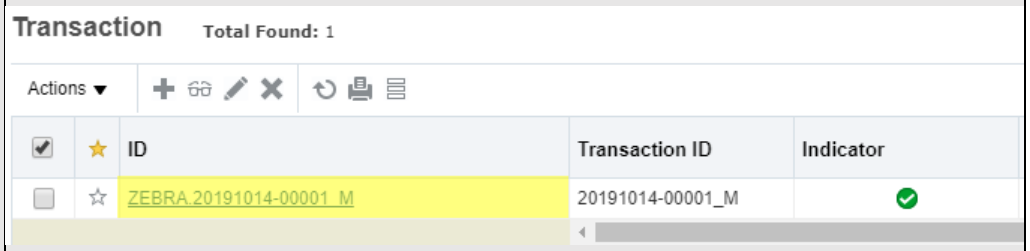
1. Optionally enter your Offline Shipment transaction ID in the Transaction ID field. You can enter partial strings to narrow your search.

   Notice other tabs are available (Details, Involved Party, etc.) to enter more search criteria such as Item ID or an Involved Party.

2. Select **Search**.



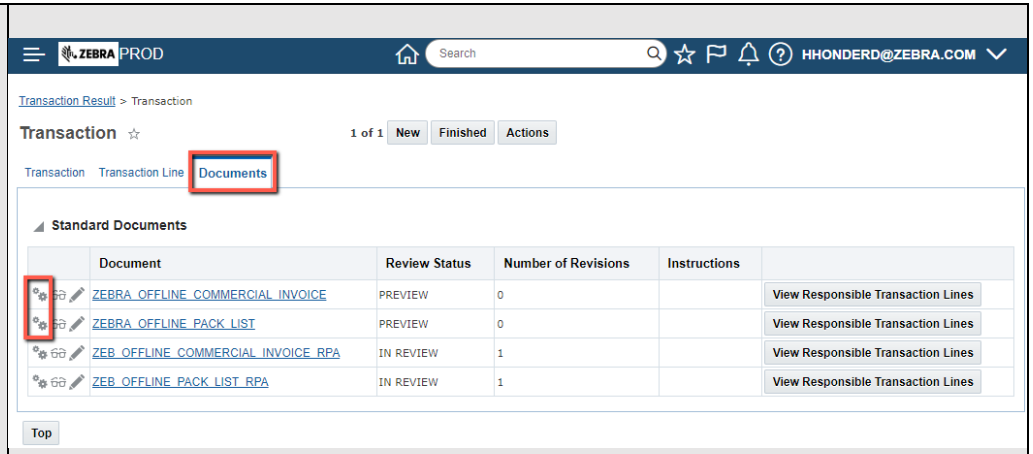
3. GTM displays a list of any/all Offline Shipment transactions that match your search criteria. Select the link under the ID column for the desired transaction to open and edit.



4. Select the **Documents** tab.

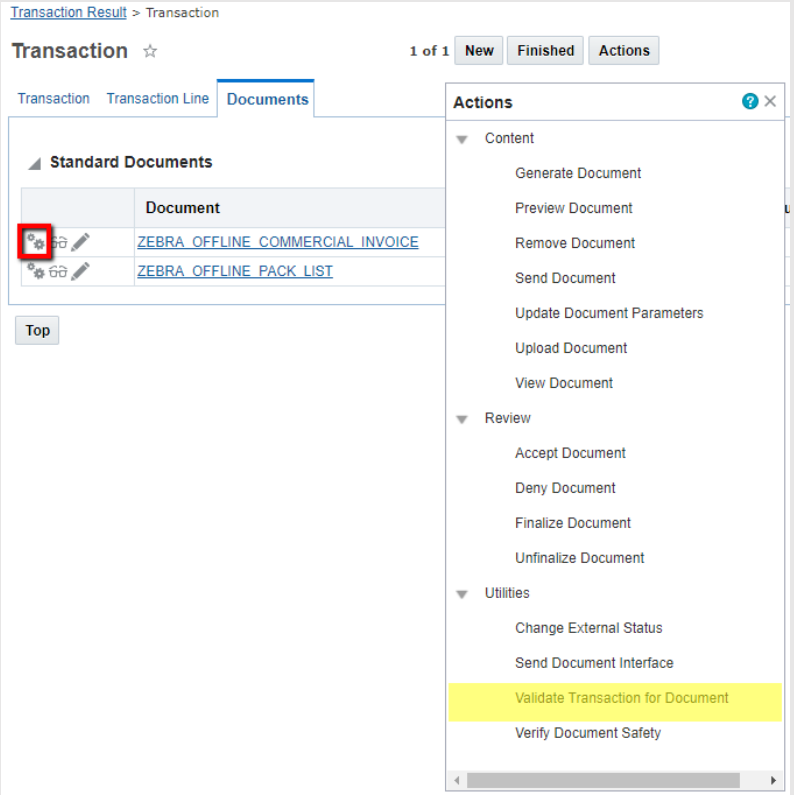
5. GTM displays a list of applicable documents for the Shipment. NOTE: If the ZEBRA OFFLINE COMMERCIAL INVOICE is “missing”, it is because your shipment is a domestic shipment—a Commercial Invoice is not needed.

6. Notice the Actions buttons ( ) next to the document types. These buttons will be used to determine whether the documents are eligible for printing and to generate the documents themselves.



7. In this example we will work with the ZEBRA OFFLINE COMMERCIAL INVOICE. The steps for producing the pack list are the same.

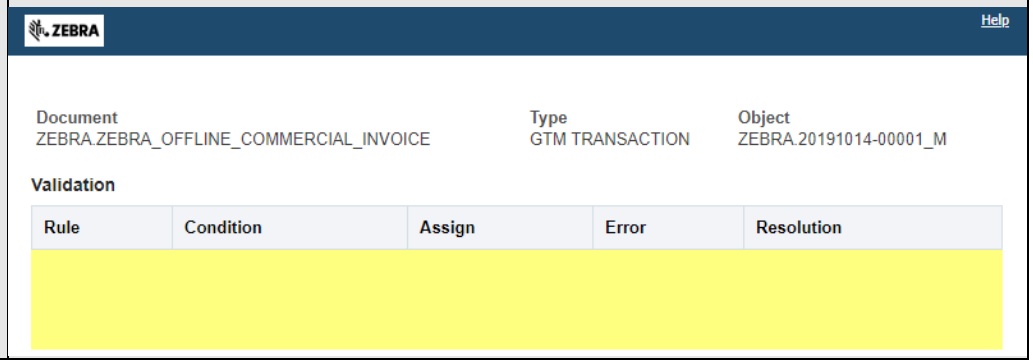
8. Select the Actions button ( ) and from the Actions > Utilities submenu, select the **Validate Transaction for Document** link.



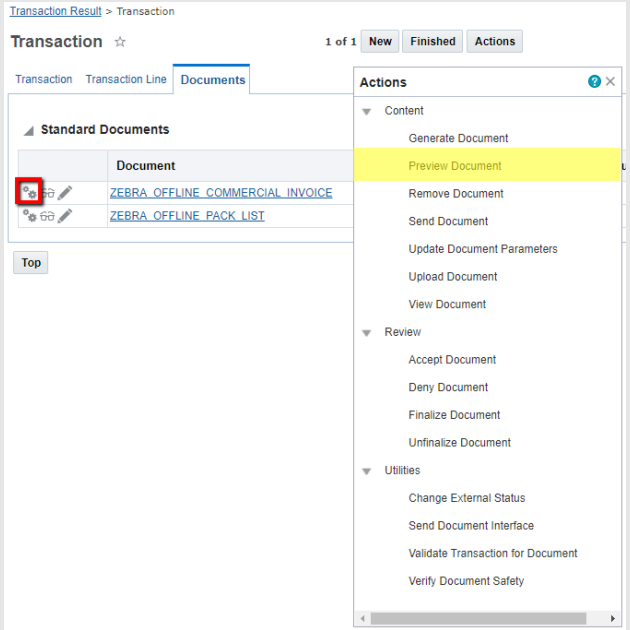
9. In this example, no errors were found (area highlighted in yellow is blank).

   Had GTM found the transaction ineligible for document generation, the reason(s) would be displayed in this area.

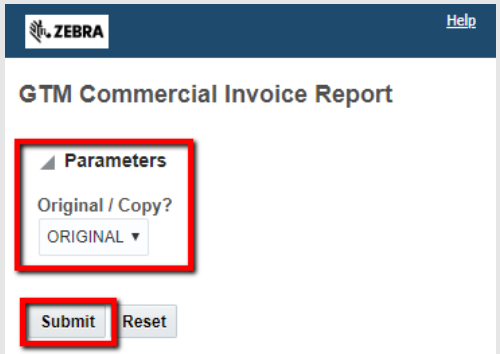
10. Close this window to return to the list of documents.



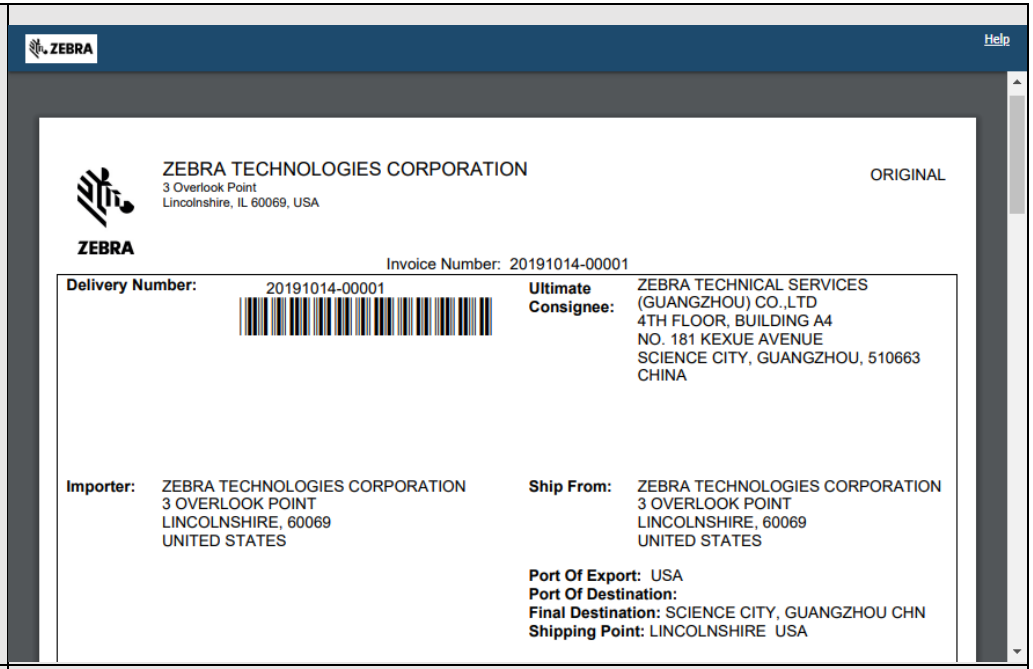
11. Now, using the same **Actions** button, select the **Preview Document** link.



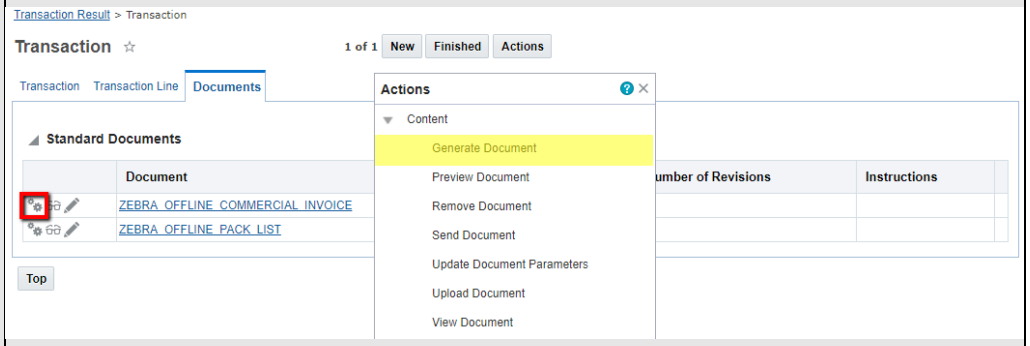
12. Select “Original” or “Copy” from the drop-down list.
13. Select the **Submit** button.



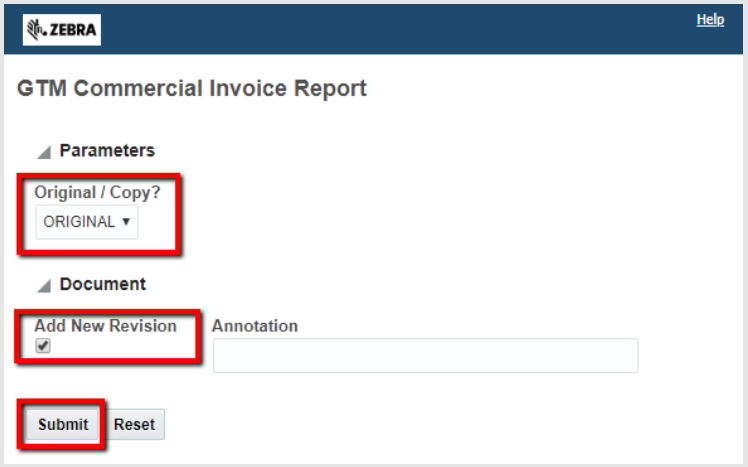
14. GTM displays a “Preview” copy of the document.
15. NOTE: The difference between a Preview and a Generated copy is primarily revision tracking. Generating a document offers the ability to assign a revision number.



16. To Generate a document, select the **Actions** button once more, but select the **Generate Document** link.

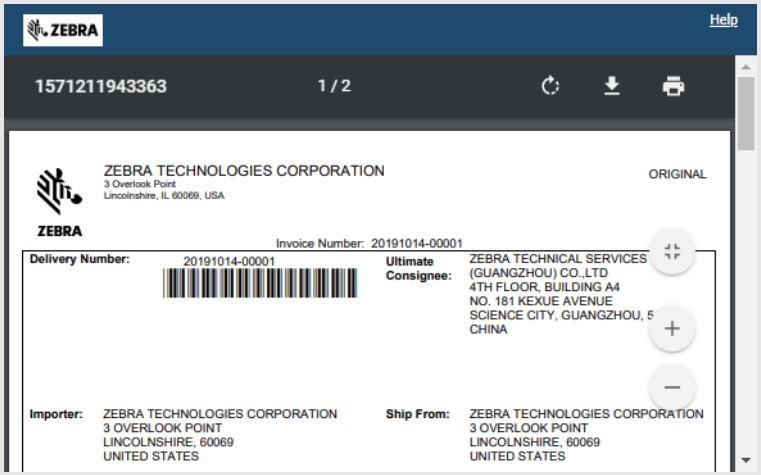


17. Select “Original” or “Copy” from the drop-down box.
18. Optionally select/de-select the “Add New Revision” check box.
19. Optionally enter an Annotation (does not print on the documents).
20. Select the **Submit** button.



21. GTM displays the generated document.

At this point the documents can be saved, downloaded, and/or printed, and sent to the shipper.



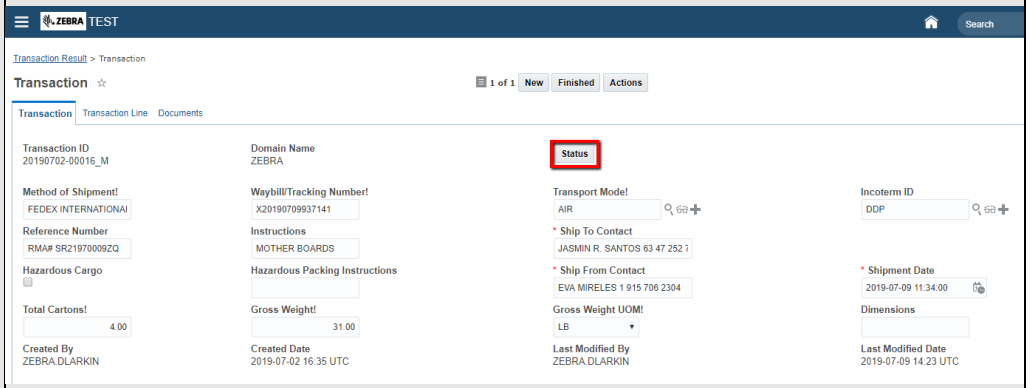
Close Offline Shipment

After 5 days post Shipment Date or Last Modified Date, whichever is later, the transaction will be automatically Closed, after which no further changes will be allowed.

NOTE: For rare occasions when a change must be made to the transaction, i.e. shipping documents, contact GTM Super Users to create a new the transaction.

1. To check the status of your transaction, select the **Status** button on the header.
2. The transaction status TS_OFFLINE_STATUS displays at status of "TS_CLOSED".

   NOTE: At this point the system will prevent to make any further changes.



Statuses

Status Type	Status Value
TS_CONTROL_SCREENING	TS_CONTROL_SCREENING_PASSED
TS_OFFLINE_STATUS	TS_CLOSED
TS_OTHER_SCREENING	TS_OTHER_SCREENING_NOT STARTED
TS_PRODUCT_CLASSIFICATION	TS_PRODUCT_CLASSIFICATION_COMPLETE
TS_RPLS	TS_RPLS_PASSED
TS_SANCTION_COUNTRIES	TS_SANCTION_COUNTRIES_PASSED

GTM Reports

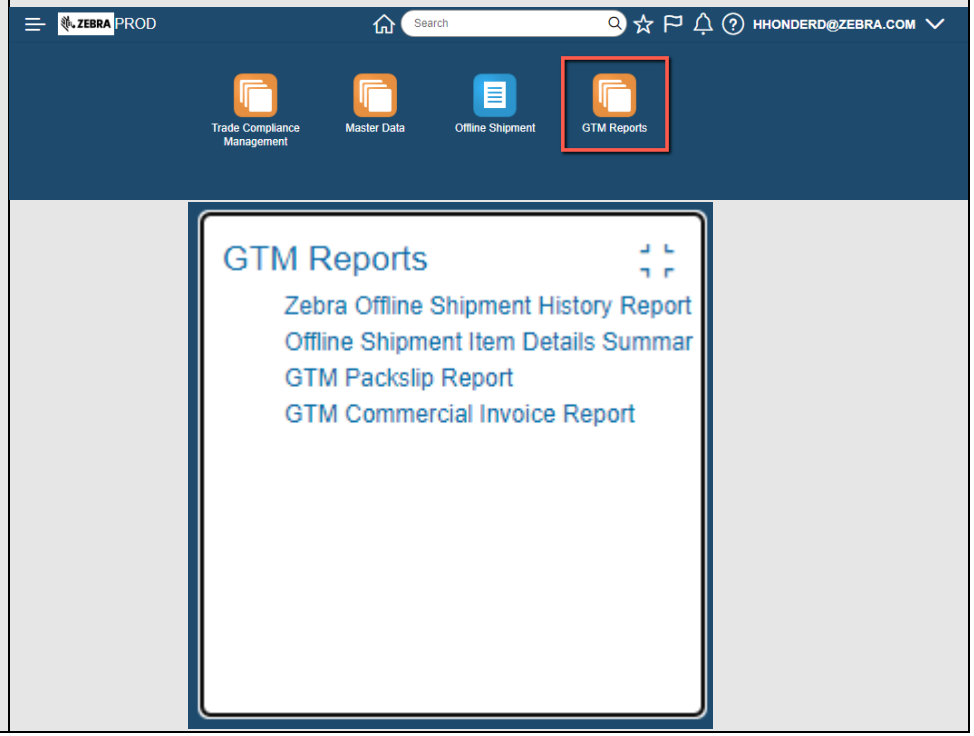
Navigation: GTM Reports

1. Select the report which is required**.**

   - **Zebra Offline Shipment History Report** – Provides an overview of historically created offline shipments.

   - **Offline Shipment Item Details Summary Report** – Provides an summary report of a single transaction which contains item information for custom brokerage purposes.

   - **GTM Packslip Report and GTM Commercial Invoice Report**– Provides the option to manually generate and send the documentation per email to any recipients.



Zebra Offline Shipment History Report – Provides an overview of historically created offline shipments.

Mandatory Parameters:

Shipping Org (Ship From Party ID), this could be specified for certain users. Example: NLZEBRA

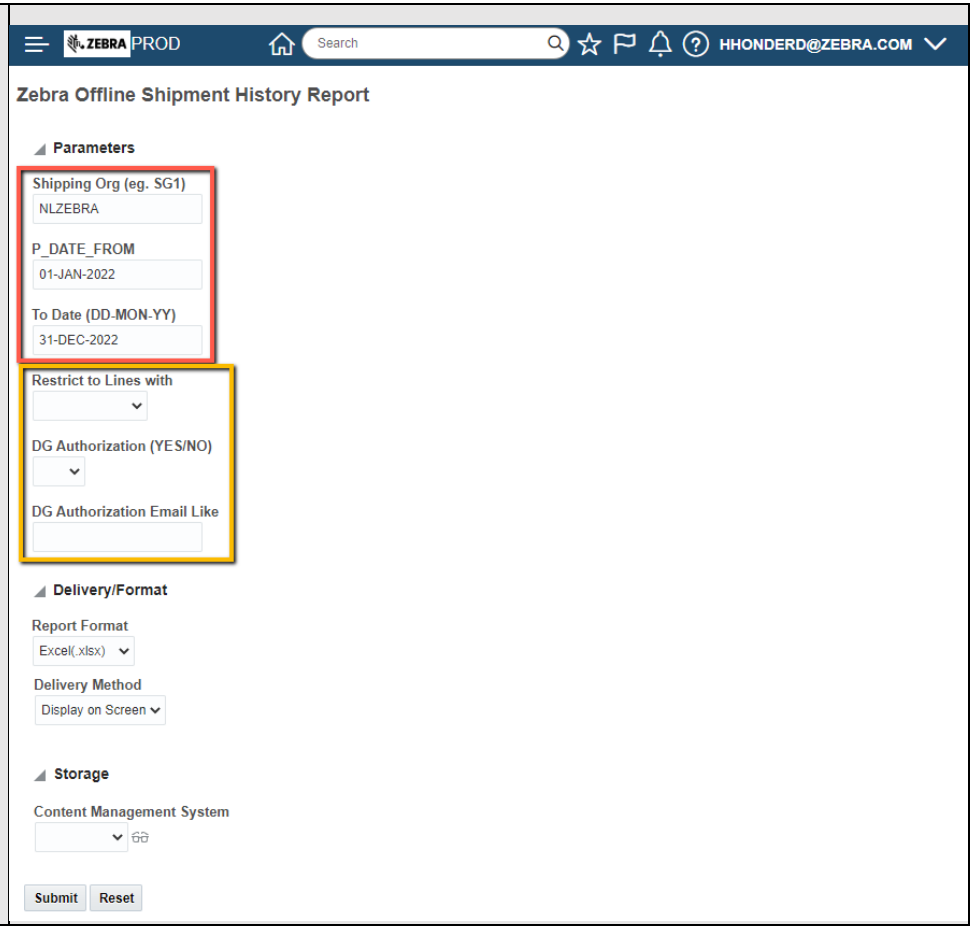
Date From and Date To: Date range of when offline shipments are created.

Optional Parameters:

You can restrict the report to lines with dangerous goods and/or just their authorizations.

Output: the report will show all transaction header and line-item information as part of a shipment. This includes all party information and item information.

Submit after selection is done and parameters are filled.



Offline Shipment Item Details Summary Report – Provides an summary report of a single transaction which contains item information for custom brokerage purposes.

Parameter:

Transaction ID must start with “ZEBRA.” followed by the Transaction ID. Example: “ZEBRA.20220826-00011_M”.

Submit after selection is done and parameters are filled.
