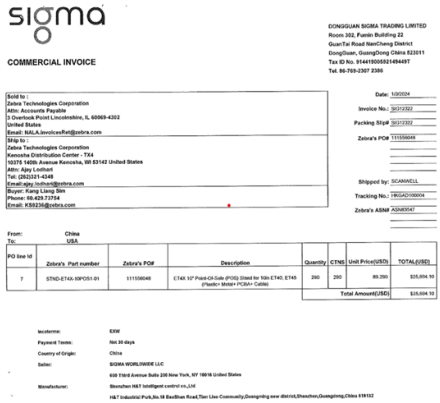
1. Overview

The purpose of this Work Instruction to provide a general view into all the primary components involved in the Inbound process.

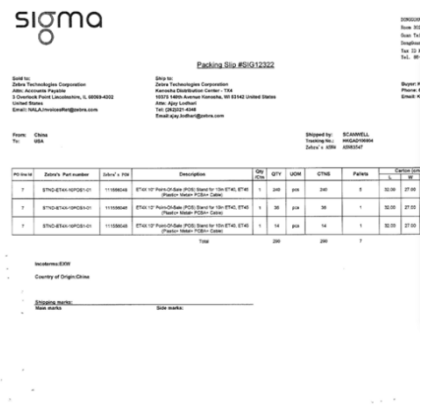
2. Pre-Alert/Appointment Scheduling

1. Carriers will reach out to Zebra about incoming arrivals by sending a 'Pre-Alert' email. This will typically contain three documents about the contents of the arrival; a House Bill, Invoice and Packing List. Carrier will also provide date of arrival.

**House Bill*

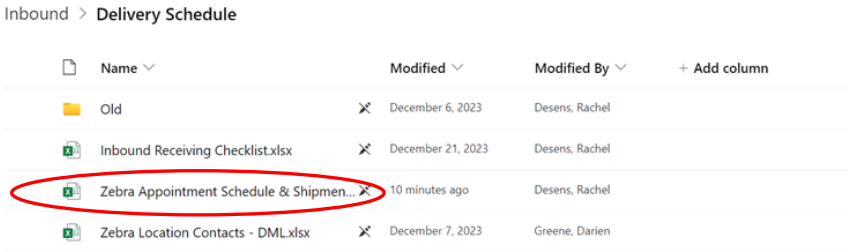


**Commercial Invoice*



**Packing List*

2. Once those three documents have been received, navigate to the Kenosha DC SharePoint, locate the Excel sheet '*Zebra Appointment Schedule and Shipment Tracker*" within the Delivery Schedule folder in 'Inbound' within site Contents.



3. Begin inputting the information received from the Pre-Alert Documents into the 'Inbound Appointments' folder.

This document contains proprietary information which is the exclusive property of Zebra Technologies Corp.

4. Once the Pre-Alert documents have been received and the information inputted into the 'Zebra Appointment Schedule and Shipment Tracker', then the associate confirms the arrival date with the carrier. That information is then added to the correct row in the Tracker.
5. Next, navigate back to the Inbound folder and select the folder 'Pre-alert Documents'. open the folder 'Pre-Alert Documents' drag and drop the House Bill, Invoice and Packing List into the new folder. Once that is complete navigate to the 'Inbound Receiving Checklist' where the 'House Bill Number, Pallets/Cartons and carrier and broker names will be inputted.
6. Print out the Inbound checklist, along with the House Bill, Invoice and Packing List and store for the arrival of the driver.

3. Arrival/Departure

1. Once the driver arrives at the facility, they will have to first check-in at the guard shack
2. Guards will contact the receiving clerk and the clerk will assign the dock door for receiving, followed by directing the guards and driver to the assigned dock door.
3. Next, the driver and the receiving team will work together to ensure that the trailer is safely docked in the assigned location

   A) The driver should confirm that a green light is showing outside the docking area, if it is red, the receiving team should be contacted.

   B) Driver should secure the swing door and begin backing the trailer up to the door

   C) Glad hand lock must be placed on the airbrake and a wheel chock must be in place.

   D) Once those measures have been taken then the receiving team ensures the trailer is positioned correctly in order to engage the trailer lock properly

4. After the unloading has occurred *Trailer Inspection and Release Verification Checklist* must be completed. Once their tasks are completed they will sign-off on the Checklist, return it the Scheduler to be filed away.
5. After the unloading has taken place, then the driver must be released. First, exit the trailer and remove any PIVs, tools, or equipment from the dock loading area.
6. Next, an associate disengages the dock plate and closes and locks the overhead bay door. Associate then removes the primary controls.
7. Finally, the driver is provided a signed copy of the BOL and other documents, the driver may remove the wheel chocks and leave the dock door.

4. Unloading – DockSafety Loading/Unloading & Inbound Driver Check In Process

1. Once the driver has docked the trailer. Using the '*Trailer Inspection and Release Verification Checklist*', begin inspecting the inside of the trailer.
2. Use lightning to inspect the contents of the trailer before the unloading begins, the lighting may come from either the Power Industrial Vehicles or the dock lighting by each loading dock.
3. Unloading crew begins to preview the load using the BOL and other paperwork provided:
   A) If the incoming load does not match the information on the BOL, notify your supervisor immediately
   B) Check the freight is properly stacked and in good condition
   C) Communicate any discrepancies to the receiving clerk
4. Receiving team may begin to unload pallets into the Inbound staging lane.
5. Once the pallets have been unloading into the Staging area, unloaders must preform a visual inspection
   D) Ensure the total pallet count is correct
   E) Inspect and note any/all damages or discrepancies on BOL, if damages are fixable please do so on the spot, if not contact Supervisor immediately. Damages/discrepancies will be managed by the DML Process.
   F) Sign and date the BOL
6. Pallets passing inspection will be staged for receipt.

5. Receiving

1. Once the shipment has been unloaded, a receipt must to be created. The type of receipt created depends on the origin of the shipment.
   A) Standard *ASN Receipt* – ASN Receipts can be used for any shipments from external ASN-Suppliers (except Jabil)

This document contains proprietary information which is the exclusive property of Zebra Technologies Corp.

The most recent version of this document is located on the Kenosha Sharepoint Digital Training Library.
Verify revision number before use.

B) *Express/Internal ASN Receipt* – can be used for shipments from Jabil – these shipments already contain all the LPN and Serial Number data, also can be used for any internal shipments

C) *PO Receipt* – Used for any shipments from external suppliers that do not provide an ASN. If an PO receipt is attempted first and it gives an error 'Pls do ASN Receipt' then this menu-option must be used. If prompted, scan the serial numbers.

2. If a correction has to be made, please follow the '*Corrections*' Work Instruction.
3. Once the shipment has been received in Oracle, the LPNs can be dropped into PAQ1.
4. Within the 'Inbound' option navigate to the 'NALA Move Any LPN' then enter the correct organization and scan the LPN into the 'LPN' field and press 'Drop'.
5. If consolidating multiple LPNs, please follow the Consolidation process
6. If not Consolidating, skip the 'Into LPN' field and drop into 'PAQ1' and an Inbound Audit Label should have been printed.

D) Some materials require 'Putaway' from another Subinventory other than 'PAQ1',
ex: material than is placed in the following Subinventories; RMF2, if that is not possible then place LPN into the suggested locator and use the 'Override' option

6. PUTAWAY

1. On the scangun, under the Inbound tab, select 'NALA move any LPN' and enter the corresponding LPN's organization and scan the LPN in the field 'LPN'. Inbound - Putaway
2. Next, the screen will show suggested Putaway, Subinventory and Locator.

A) The 'Into LPN' field is optional:

a) To transfer contents into an existing LPN in the location, scan/enter the Destination LPN, scan the barcode on the rack to confirm both the Subinventory and Locator with a single scan and select the 'Transfer Contents' button

b) If the 'Into LPN' field is left blank, scan the locator barcode on the rack to confirm both the Subinventory and the Locator.

c) Select either the 'Drop Full LPN' or 'Transfer Contents' button, then a 'Task Complete' message will be displayed at the bottom of the screen and it is in it's final Inventory location.

3. The 'Override' option must be used when it is not possible to put the LPN in the location suggested on the scangun.

This document contains proprietary information which is the exclusive property of Zebra Technologies Corp.

Verify revision number before use.

B) Instead of scanning the suggested locator, find an alternate location where the LPN can be put away, the 'Into LPN' field is optional

d) Scan the locator barcode on the rack for the new locator to confirm both the new Subinventory and new Locator with a single scan

e) The scangun will display the 'Override' option screen, select the reason and press 'Enter' and complete the puaway into the chosen locator.

f) The 'ZBRWMS Putaway Locator Override Report' can be used to view all Override Transactions.
