PUTAWAY

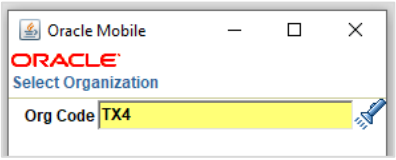
Once the Quality and Quantity Checks are completed in Oracle, the LPNs can be moved from 'PAQ1' into the final storage locator. The Inbound Audit Label may already show the suggested locator (at time of printing), however this can be updated to a new suggestion during the actual Putaway process described below.

Please Note:

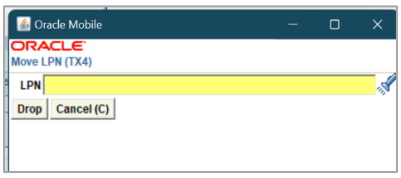
- *Some materials will require putaway from another subinventory other than 'PAQ1', for example material that is placed in the following subinventories: 'RMA1', DOA1, 'UMAT'*
- *If it is not possible to place the LPN into the suggested locator, then the 'Override' option must be used instead*

Step 1: Using the Mobile Application, navigate to 'Inbound'-> 'NALA Move Any LPN'

Step 2: Enter the correct Organization and press 'Enter' on the keypad

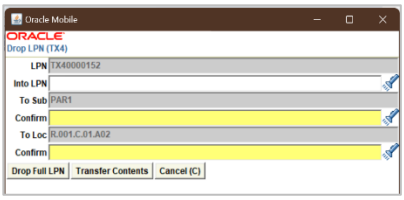


Step 3: In the LPN field, scan the LPN and click on 'Drop'



Step 4: The screen will show the suggested putaway subinventory and locator

Use Override option if needed (refer next page)



The 'Into LPN' field is optional:

1. To transfer contents into an existing LPN in the location, scan/enter the Destination LPN.

   Then scan the locator barcode on the rack to confirm both the Subinventory and Locator with a single scan.

   Finally select the 'Transfer Contents' button.

2. If the 'Into LPN' field is left blank, simply scan the locator barcode on the rack to confirm both the Subinventory and Locator with a single scan.

   Select either the 'Drop Full LPN' or 'Transfer Contents' button:

Transfer Contents
Non-serialized items
Serialized items with 2D barcode on each box
Destination = PAR1 (except serialized items without 2D barcodes)
Drop Full LPN
Pallet with large qty of loose material (e.g. printers)
Serialized items without a 2D barcode and usually picked as full pallet
Destination = PAR1 for serialized items without 2D barcodes

Transfer Contents: selecting this option will putaway the items into
the destination LPN (if specified under 'Into LPN') or it will drop loose otherwise.

Drop Full LPN: selecting this option will putaway the entire LPN into the location. If an LPN already exists in that location the new LPN will be added

A 'Task Complete' message will be displayed at the bottom of the screen.

The LPN is now dropped into the final Inventory Location.

PUTAWAY OVERRIDE OPTION

When it is not possible to put the LPN in the location suggested on the scangun, then the 'Override' process must be followed in Step 4. The changes in the process are shown below.

Step 4: Instead of scanning the suggested locator, first find/select an alternative location where the LPN can be put away

Again the 'Into LPN' field is optional

Scan the locator barcode on the rack for the new locator to confirm both the new Subinventory and new Locator with a single scan.

The scangun will now display the 'Override' option screen.
Select the correct reason and press 'Enter'
Complete the putaway into the chosen locator.

	Reason	Desc
1	BMT	Battery Management Transfer Only
2	DIFF-ITEM	Different Item in Location
3	NO-FIT	Material does not fit in Location
4	NOT-EMPTY	Location Not Empty
5	Override locator	Override system suggested locator
6	PAQ1	Override to PAQ1
7	RACK-DAM	Rack Damaged
8	Staging Move	Reason code to support movement of LPNs within staging
9	USER-LOC	User found better Location

The 'ZBRWMS Putaway Locator Override Report' can be used to view all Override transactions:
