1. OVERVIEW

The following document provides a detailed overview of the Outbound LTL Manifesting process at Kenosha facility.

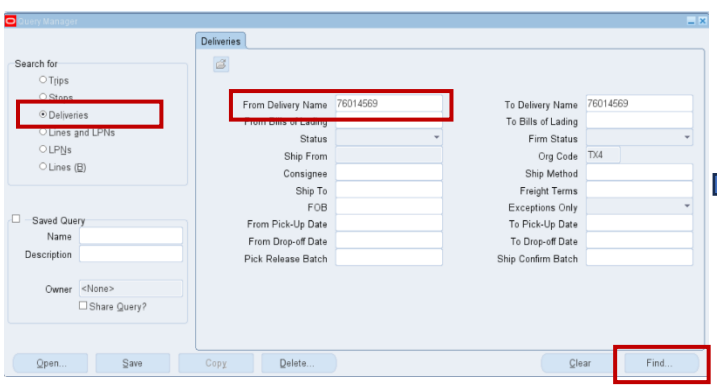
2. EQUIPMENT, SUPPLIES AND CONSUMABLES

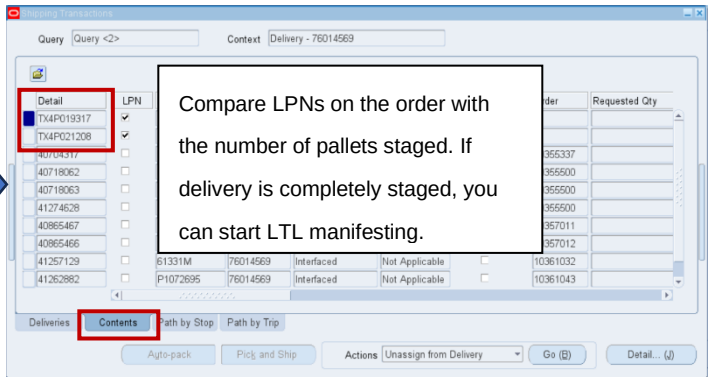
1. The following equipment, consumables and supplies are necessary to perform the function of LTL order manifesting:

   Mobile cart, tablet, keyboard, mouse, scanner, tabletop or desktop label printer, LaserJet printer, 4”x6.5” labels, copy paper, carrier PRO numbers, white cones, pink cones with carrier designation, writing supplies.

3. LTL MANIFESTING

1. On the dock, identify the deliveries that are completed and ready for manifesting by going to Shipping Transactions form in Oracle ERP and making an inquiry on delivery.





Compare LPNs on the order with the number of pallets staged. If delivery is completely staged, you can start LTL manifesting.

2. **<u>For BlueStar: if Third Party Freight Bill To is specified in the packing notes</u>**, in the Shipping Transactions form, hit the clip sign, select Third Party Freight Bill To, and add the following address in the text field: ~Bluestar Inc~3345 Point Pleasant Rd~Hebron~Kentucky~41048~US~

   ✓ Make sure to hit the save icon once a third party billing address is added.

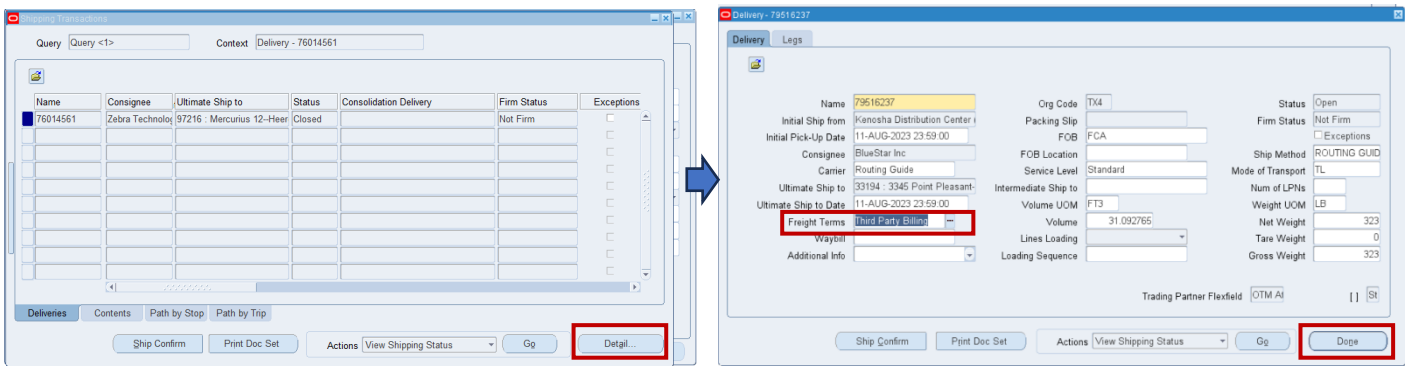
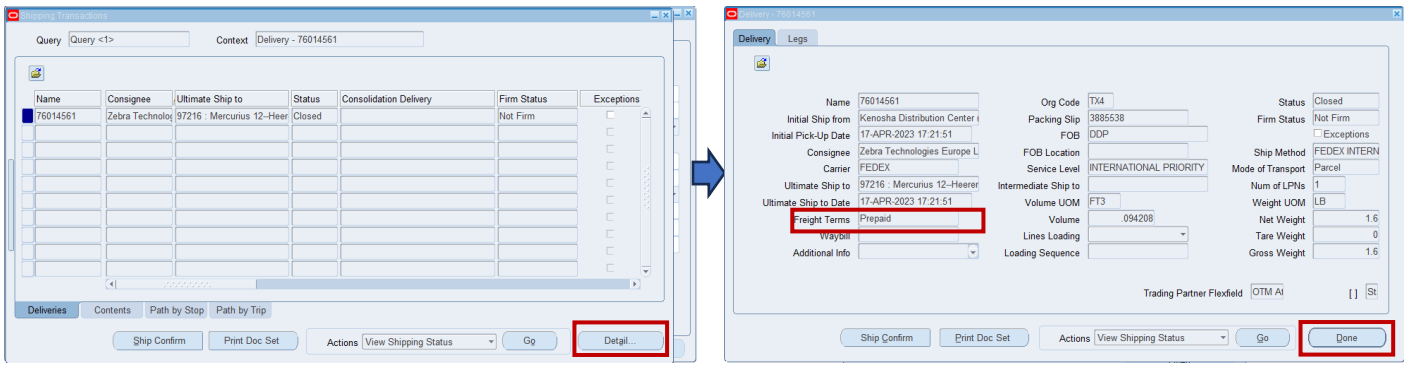
3. **<u>For BlueStar: if Third Party Freight Bill To is specified in the packing notes</u>**, in the Shipping Transactions form, go to Details, and change the Freight Terms to <u>Third Party Billing</u>.

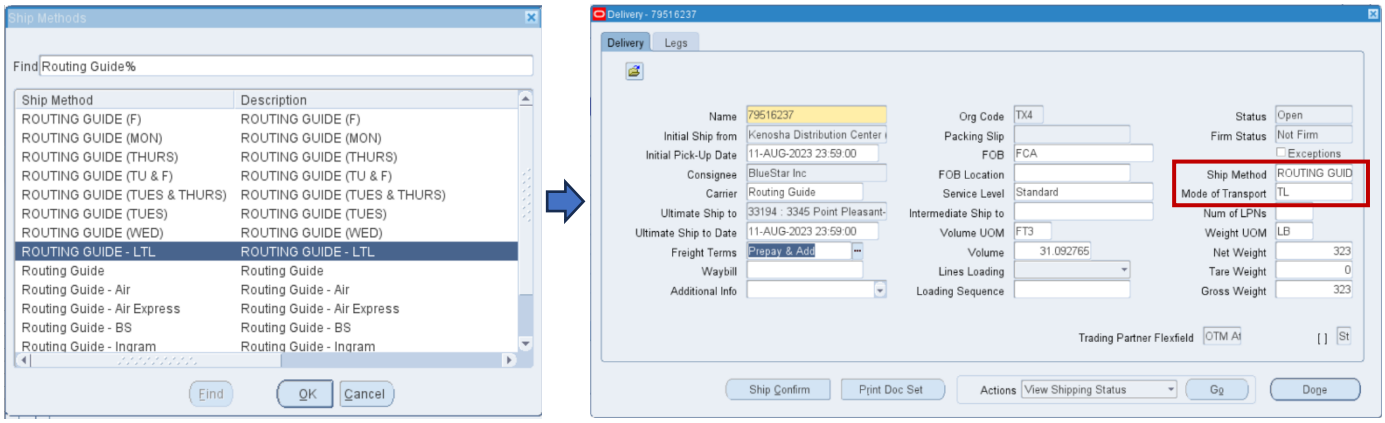


4. **<u>If DBK or Zebra shipments</u>**, in the Shipping Transactions form, go to Details, and change the Freight Terms to <u>Prepaid</u>.



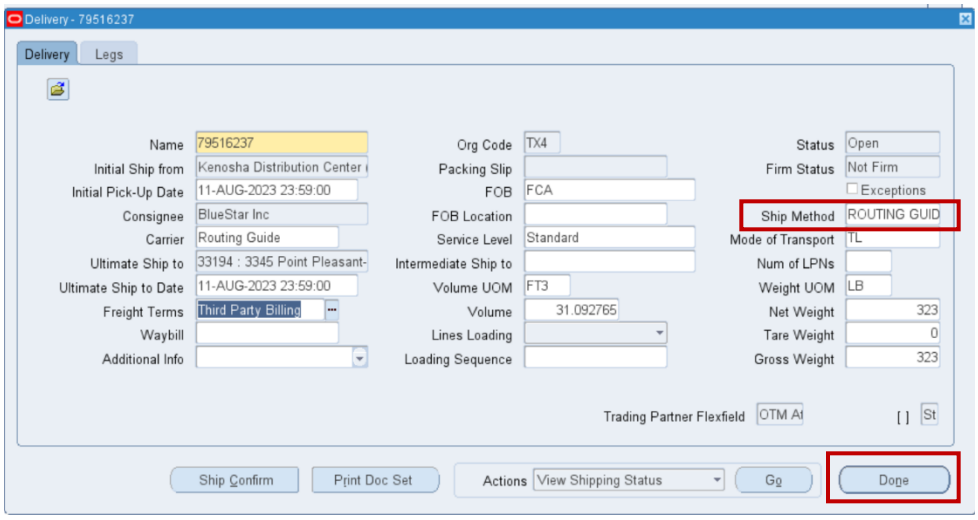
5. **<u>Before Infoship Shipment Call</u>**, in the Shipping Transactions form, go to Details and make sure that correct routing for the shipment is selected:

   A) **<u>For domestic TL or LTL shipments</u>**, a Routing Guide – LTL is to be specified in the Ship Method field. If another entry is specified, click into the field to edit it, and select Routing Guide – LTL in the dialog box.



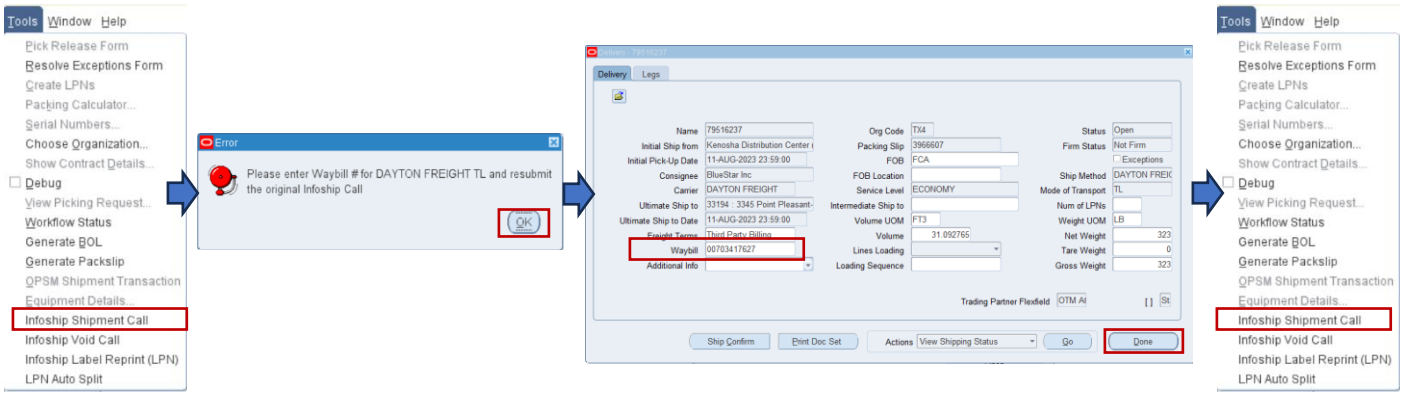
B) **<u>For International shipments</u>**, edit the Ship Method field to specify the routing according to the guidelines set in Kenosha Outbound Routing Guide.

✓ If the order has a **<u>domestic</u>** freight forwarder address listed, please ship via **<u>Bestway – Ground</u>**.



6. Once proper freight terms and routing are specified, in the Shipping Transactions form, go to Tools and perform an Infoship Shipment Call transaction according to WI-Outbound-LTL InfoShip Call using Routing Guide.

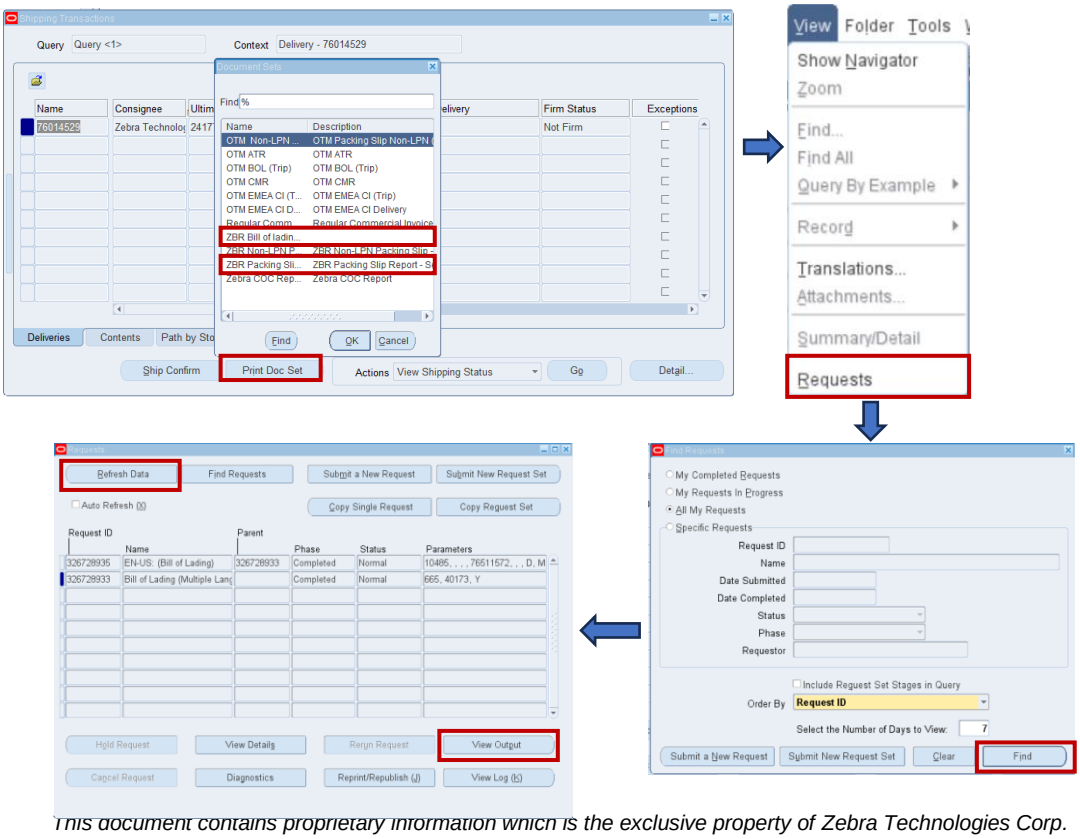
✓ Infoship Shipment Call must be executed twice, first time to determine the carrier and obtain required PRO number, and then the second time to manifest the shipment after PRO number is entered.



7. Apply generated carrier labels and PRO number tags to each pallet, matching pallet LPNs to the listed LPNs on the carrier label.

   - ✓ Make sure that the label is aligned with the edges of the pallets, doesn't overlap, or fold over the edge.
   - ✓ Make sure that the label contents are not cutoff and visible.

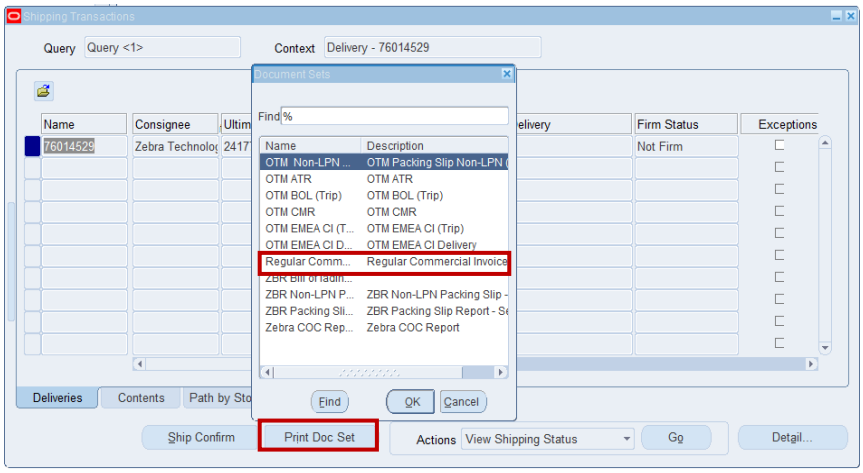
8. After delivery is successfully manifested and labeled, in the Shipping Transactions form, go to Print Doc Set, and generate and print Packing List and BOLs by following [WI-Outbound-Generate Shipping Documents].



- ✓ Make sure to print two copies of BOL unless a different amount is specified on PCR.
- ✓ Make sure to send a print job to the closest printer on the outbound dock for time efficiency.
- ✓ Ensure that the printer settings are correct and do not cutoff any information on the BOL, packing list or commercial invoice.
- ✓ Before printing a document list, reference packing notes to ensure compliance with customer-specific requirements such as non-LPN packing list.

9. **<u>If the shipment is international</u>**, in the Shipping Transactions form, go to Print Doc Set, generate and print Commercial Invoice by following <u>WI-Outbound-Generate Shipping Documents</u>.

- ✓ Make sure to print three copies of Commercial Invoice unless a different amount is specified on PCR.
- ✓ Make sure to send a print job to the closest printer on the outbound dock for time efficiency.



10. **<u>If the shipment contains UN3090 or UN3480 material going via Air</u>**, generate and print DG Shipper Declaration in DGIS by following <u>DGIS Shipper Declaration for Air Shipments</u>.

- ✓ Only people certified in DG handling are allowed to process Air shipments containing DG items.
- ✓ When sending a print job for DG Shipper Declaration, make sure to use a **<u>colored printer</u>** to print red margins on the document!

11. **<u>If the shipment is for BlueStar Kentucky</u>**, generate an outbound placard using the template outlined in <u>LTL Bluestar Placard</u>.

- ✓ Generate one copy of the form per pallet.
- ✓ Make sure to send a print job to the closest printer on the outbound dock for time efficiency.

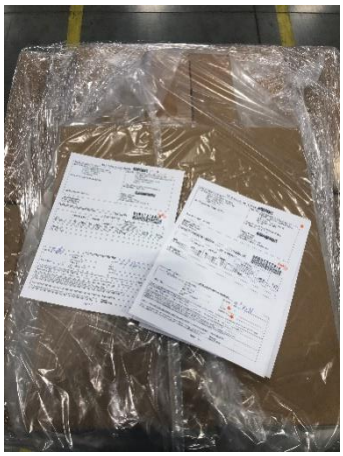
12. Once all the necessary documents are printed out, travel to the printer to grab the paperwork for the order.



A) Place the BOLs on top of the first pallet (closest to the dock doors).

✓ Make sure to attach PRO number to the BOL to provide tracking to the customer.

B) Secure the Packing List, Commercial Invoices (if present), and DG Shipper Declaration (if present) in the packing slip and attach the slip to the first pallet (closest to the dock doors).

C) **<u>If BlueStar Kentucky shipment</u>**, place an Outbound Placard inside the wrap of every pallet.

13. Once the delivery is manifested, labeled, and contains the necessary shipping documents, place the pink cone with the carrier's name on top of the pallet, and add a white cone.

4. DOCK ORGANIZATION

1. Sometimes, there will be multiple orders going with the same carrier. In this case, consolidate the deliveries going with the same carrier in proximity (same staging lane or adjacent staging lanes).

- ✓ Make sure that each delivery has been clearly identified with the pink carrier cone.
- ✓ Constantly monitor the dock to look for opportunities to consolidate the pallets together for easier loading.
