OVERVIEW

To establish a standardized process for identifying, verifying, and resolving Mispicks in the warehouse, ensuring inventory accuracy, proper handling of serialized products, and smooth operations.

1. MISPICK IDENTIFY

1. The warehouse associate, usually the packer, identifies a potential Mispick during the packing process.
2. The lead verifies the Mispick by checking the order details, the physical products and the location from which it was picked.
3. Once the Mispick is verified, it must be logged into the Overages and Shortages Form:
   - Reference Overages & Shortages

A) Types of Mispicks that can be verified:

- **Short Pick**: Less quantity than requested.
- **Over Pick**: More quantity than requested.
- **Wrong SKU:** Picker picking the wrong SKU
- **Serialized Product Mispick**: Missing or misallocated serial numbers.

B) This form should include:

- ✓ Name of the Picker
- ✓ Overage/Shortage details (Delivery number, part number, qty).
- ✓ Part Label available
- ✓ Serialized items involved (if applicable).
- ✓ The location counted and who counted the location

2. SHORT PICK

1. Once the short pick is confirmed, the lead or Supervisor sends the picker to the location from which the product was picked to perform a cycle count on the location.
2. If the location is **overstocked**, grab the missing material and fulfill the order.
3. If the location is **correct** (i.e., the count matches the system, and no extra stock is found), the lead or a different packer from the one that reported the short pick must recount the picked product.
4. If the product was **misplaced** in the packing area, the supervisor or lead must update the preaudit issue form.
5. If the location is **still short**, the lead or Supervisor must split the line and backorder the shortage.
   - Reference section 6 of this document.
     - ✓ Use the **IC Comm Process** to alert the inventory control team to make the necessary adjustments in the system.
6. Ensure the short pick is tracked with all relevant details in the **LTL Packing Pre-Audit Issues Log** in Overages and Shortages.xlsx

3. Over Pick

1. If an overage is discovered, the leader or Supervisor will ask the picker to:
   a. **Return** the excess to its original location within 24 hours.
   b. **Verify Location Accuracy**: The picker ensures that the location of the overage is accurate and matches the system.
   c. If the location is **incorrect**, use the IC Comm Process to alert the inventory control team to adjust the inventory in the system.
2. Ensure the overage is tracked with all relevant details in the Overages and Shortages form.

4. Wrong SKU

1. If the wrong SKU is discovered, the lead or supervisor sends the picker to the location where the product should have been picked to verify that the product in the location is correct.
2. If the location has the correct product, grab the correct product.
3. If the location has the incorrect product, inform the lead or supervisor.
4. Use the IC Comm to communicate the issue to Inventory.

5. Serialized Product Mispick/Verification

1. If the serialized product is discovered missing during the packing process, check the order and determine which serial numbers are missing or misallocated.
2. Inspect the location where the product was picked from to attempt to identify the missing serial numbers from the order.
3. If unable to resolve, involve the lead or Supervisor.

6. Unable to Locate Serial Numbers

1. Follow the steps below if the missing serial numbers cannot be located.

   a. Transfer to a New LPN: Transfer the affected product or serial numbers to a new LPN (License Plate Number)

   b. Create a New Delivery: Transfer the LPN to its own delivery.

   c. Backorder the Delivery: Place the new delivery on backorder.
   - ✓ Ensure that the backorder is filled out correctly using the Backorder Form.
   - ✓ Follow all backorder protocols to ensure the correct serial numbers are tracked.
   - ➢ Reference WI - Outbound - Backordering v1.0.pdf

   d. Redrop the sales Order: After the backorder is confirmed, we will only re-drop the sales order if it is a sys, config, or a hot order.
