SALES ORDER BACKORDERING

Backordering for a Sales Order may be required, for example when the Sales Order is cancelled or if the materials are damaged.

Depending on the status of the Sales Order/Delivery (e.g., before or after picking) the steps to follow will be different.

In this Work Instruction the following cases are described:

I. Backorder an entire Delivery after picking has been completed

II. Create a partial backorder after picking has been completed

III. Create a backorder before the pick tasks are completed

IV. Create a backorder after the pick tasks are loaded, but before the LPNs are dropped

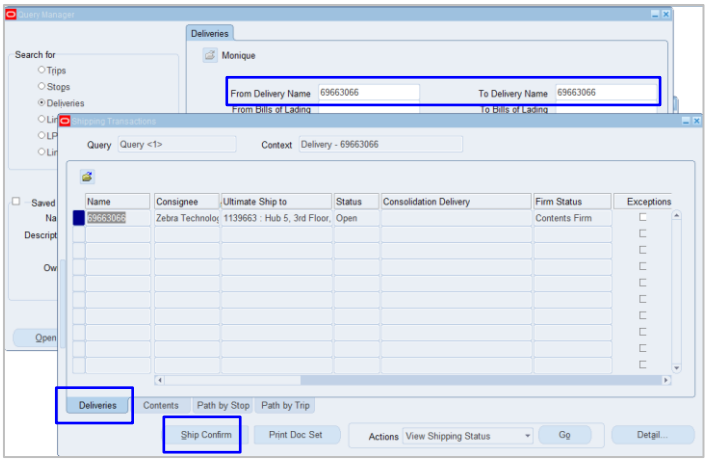
V. A combination of the above

I. BACKORDER AN ENTIRE DELIVERY AFTER PICKING HAS BEEN COMPLETED

Step 1: Using Oracle Forms, navigate to the 'Shipping Transactions' Form

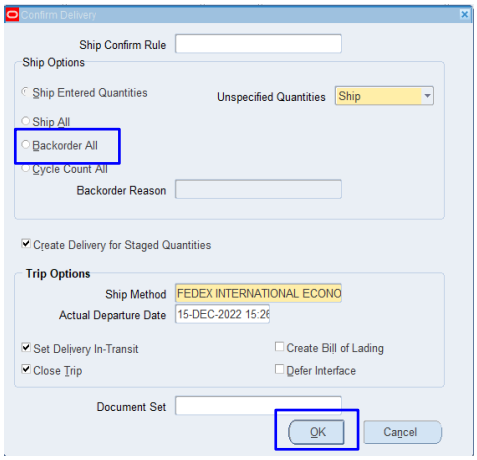
Step 2: Select the 'Deliveries' radio button

Enter the Delivery number in the 'From Delivery Name' and 'To Delivery Name' fields



Step 3: Make sure you are on the 'Deliveries' Tab
Click on the 'Ship Confirm' button.

Step 4: Select option 'Backorder All'



Click on 'OK'

The Sales Order lines will be backordered

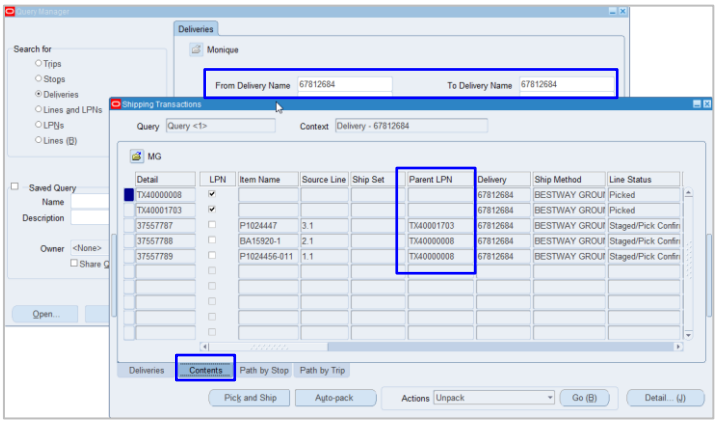
II. CREATE A PARTIAL BACKORDER AFTER PICKING HAS BEEN COMPLETED, E.G IN CASE OF DAMAGED BOXES

Step 1: Using Oracle Forms, navigate to the 'Shipping Transactions' Form

Step 2: Select the 'Deliveries' radio button

Enter the Delivery number in the 'From Delivery Name' and 'To Delivery Name' fields

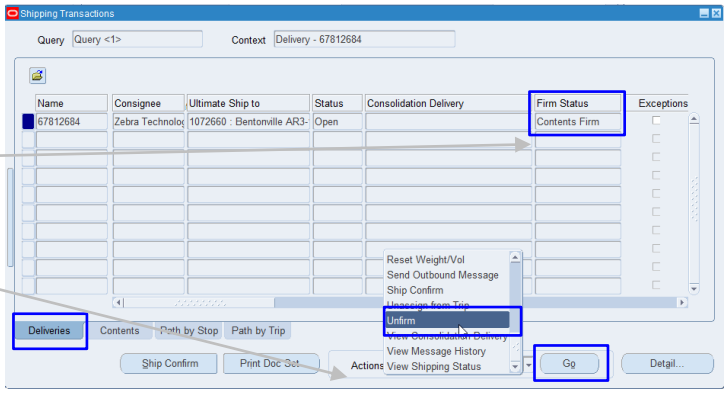
Ensure that the damaged materials are on a separate LPN. Where necessary use the 'Packing'-> 'Split' option to separate the materials (on the scangun)



Step 3: Re-query the Delivery

Select the 'Deliveries' tab

If the Firm status shows 'Contents Firm', then go to 'Actions' and select the 'Unfirm' option.
Then click on 'Go'



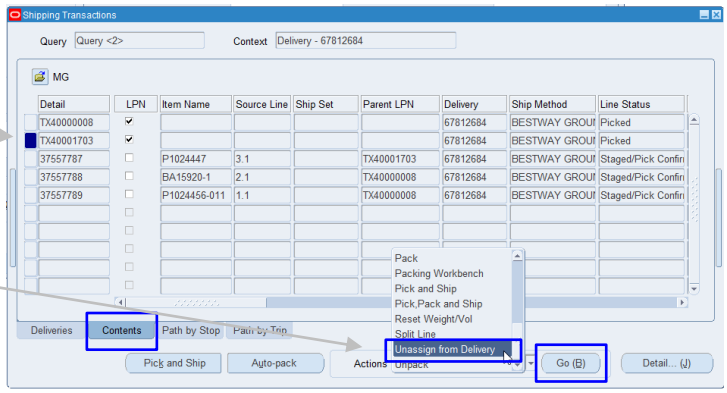
Step 4: Select the 'Contents' tab again.

Now select the record for the LPN you need to backorder

Unassign the LPN from the Delivery going to 'Actions' again and selecting 'Unassign from Delivery'

Then click on 'Go'

You will see that the Delivery field will be blanked out for that LPN

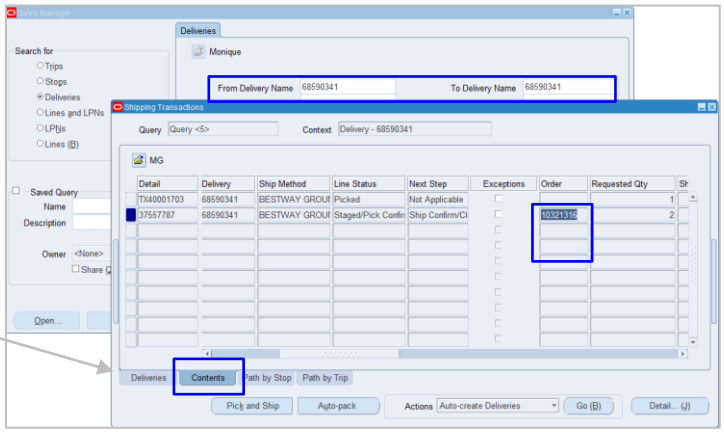


Step 5: Assign this LPN to a new Delivery go to 'Actions' and select option 'Auto-Create Deliveries'.
Click on 'Go' again.

Check the new delivery number

Step 6: Go back to the selection criteria and query for the new Delivery.
Select the 'Contents' tab
Record the Order Number (you may need to scroll)

Step 7: Select the 'Deliveries' tab again and click on 'Ship Confirm'
Select option 'Backorder All' and click on 'OK'



Important!

When backordering is done after picking & dropping, regardless of the reason, keep in mind that **the stock is showing in inventory on the staging locator** once the delivery is backordered.

To make these materials available again for future picks, they must be moved to stock using a subinventory transfer (e.g., to FIG1). However, in case of damaged items, these must be inventory transferred (sub transfer) to the Subinventory for Damaged goods.

If required the Sales Order can be released again in the normal way

Note:
In case of a new pick release to replace the damaged items, you would want to add the newly released items to the original delivery. To do this, unassign the items from the new delivery and assign these to the original delivery. If part of an order is backordered and the order is on a ship set / ship complete, the original items should be merged again on one delivery.

III. CREATE A BACKORDER BEFORE THE PICK TASKS ARE COMPLETED

It may be required to create a backorder before the pick tasks are completed, for example upon customer request.

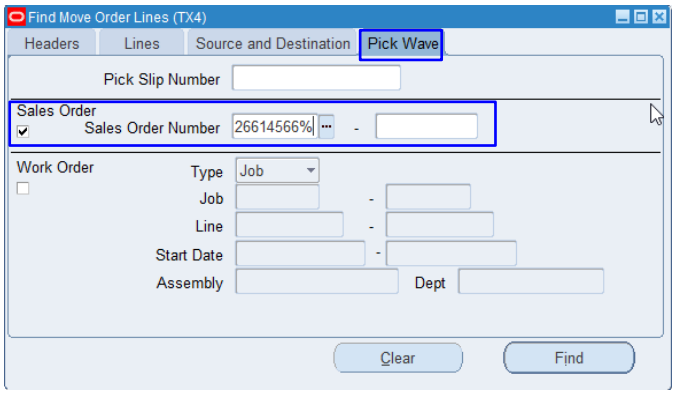
To do this – follow the following steps:

Step 1: Using Oracle Forms, navigate to
'Inventory Transactions' -> 'Transact Move Orders'

Step 2: Select the 'Pick Wave' tab

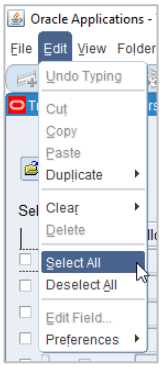
Tick the box for 'Sales Order' and enter the Sales Order Number followed by the '%' sign (This will ensure that the required Order Type is automatically added to the SO number)

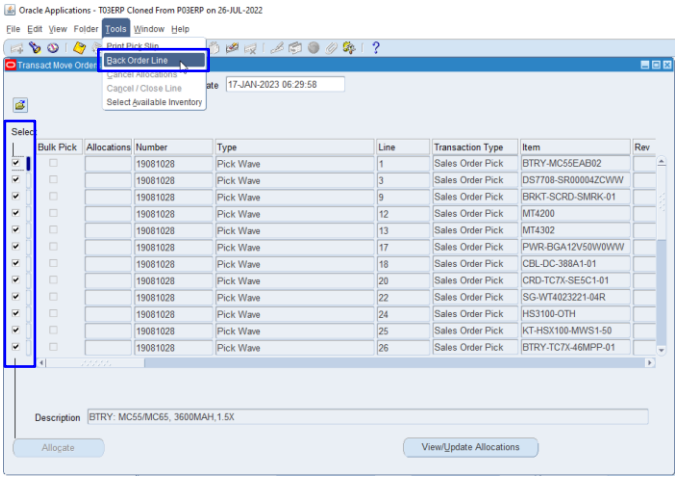
Click on 'Find'



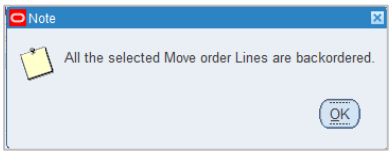
Step 3: Select the line(s) you want to backorder and go to 'Tools' -> 'Back Order Line'

Note:
If you want to select all the lines you can do this via the 'Edit'-> 'Select All' option in the toolbar at the top:





The following message will be displayed:



Click on 'OK'

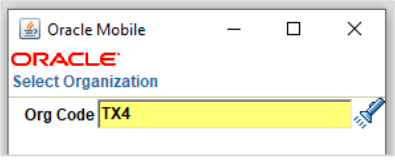
This process will remove the picking tasks from the WMS Control Board

IV. CREATE A BACKORDER AFTER THE PICK TASKS ARE LOADED BUT BEFORE THEY ARE DROPPED

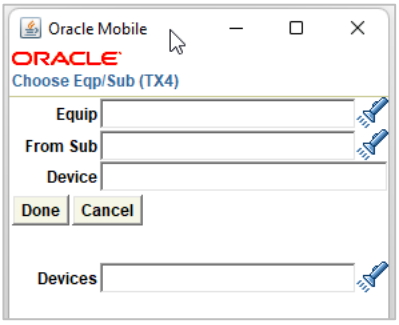
To execute this option, you first need to check the WMS Control Board for the loaded LPN numbers and the locations these were picked from.

Step 1: Using the Mobile Application, navigate to 'Picking'-> 'Manual Unload'

Step 2: Enter the correct Organization and press 'Enter' on the keypad

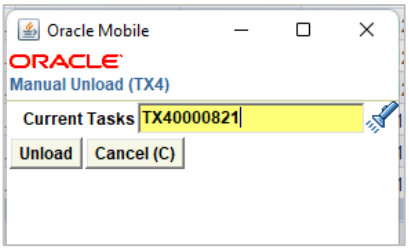


Step 3: Simply click on 'Done' without entering any equipment information



Step 4: In the 'Current Tasks' field, scan or enter the loaded LPN number

Click on 'Unload'



Step 5: Physically return the goods to the original warehouse location(s) where the items were picked from

This process will generate replacement picking tasks in the WMS Control Board. So, please follow the steps under option III to remove the picking tasks

V. CREATE A BACKORDER AFTER SOME PICK TASKS ARE COMPLETED

Creating the backorder should be performed using both the Shipping Transaction Form (Option II) and the Transact Move Orders form (Option III) as described in the processes above
