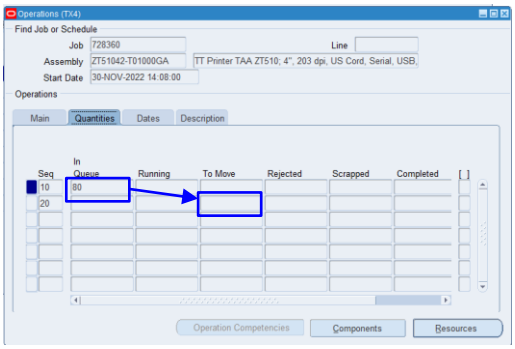
WIP JOB MOVE TRANSACTION

Once the Assembly line has been fully set up for the WIP Job, a 'Move Transaction' must be done to enable the 'Assembly Completions' for the job.

Each job has specific 'Operations' assigned to ensure that the job can be processed. Each 'Operation' represents a step in the actual completion process.
Each job usually has 2 Operations (Seq 10 and 20)



To ensure that the 'Assembly Completions' can be done for the job, the job quantity must be moved to the 'To Move' column for the last Operation.

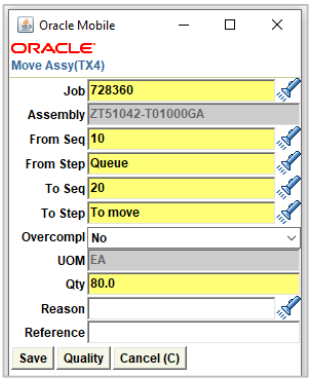
Step 1: Use responsibility 'ZTC Reconfiguration Mobile Apps'
And navigate to 'Move Assy'

Enter the correct Organization Code 'TX4' if requested

Step 2: Enter the following details:

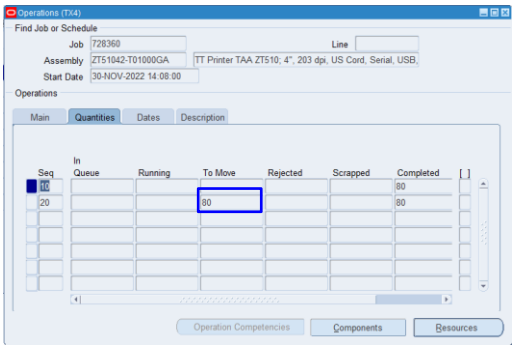
- Job: Scan or enter the Job number
- From Seq: '10' (defaulted)
- From Step: 'Queue' (defaulted)
- To Seq: Enter '20' (or select using the search icon)
- To Step: Enter 'To move' (or select using the search icon)
- Qty: Enter the quantity to be move (defaulted to the job quantity)

Click on the 'Save' button



A 'Txn Success' message will be displayed at the bottom of the screen

Please note: It is also possible to perform a Move Transaction back to the 'Queue' step. In that case the 'From Seq' will be '20' and the 'To Seq' will be 10.



The Move Transaction is completed, the Job is now ready for the Assembly Completion step
