CORRECTIONS

The Receiving Corrections option in Oracle allows you to make corrections to the receiving transactions. Such corrections are usually done by the Senior/Teamlead/Supervisor.

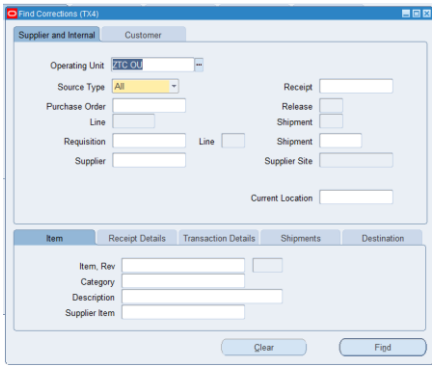
Receipts in Oracle are usually done in 2 steps:
- The initial receipt -> Receive Transaction (In Receiving)
- The putaway/drop of the LPN -> Deliver Transaction

When processing corrections these should be corrected in reverse order. So if the 'Deliver' step has already been done, this should be corrected first.

Note: Items that are being returned to the vendor (supplier) should be processed using the Return to Vendor menu-option instead.

Step 1: Using Oracle Forms, navigate to 'Inbound Logistics'-> 'Corrections'

Step 2: Either enter the Receipt number, the ASN number (into the 'Shipment' field), the PO number or any other selection criteria. And click on 'Find'



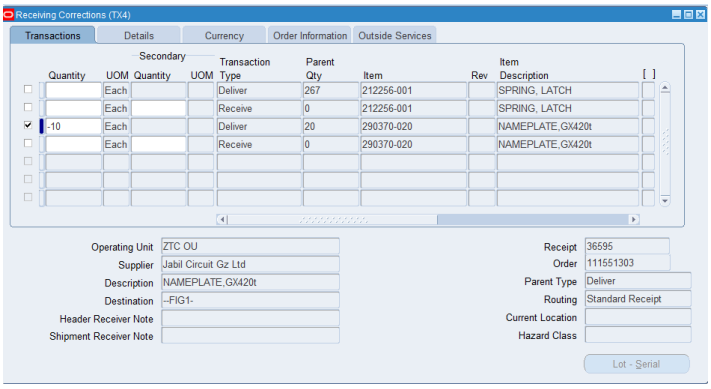
Step 3: Select the line with the 'Deliver' Transaction type. If this does not exist, then select the line with 'Receive'.

To reduce the quantity of the receipt, enter a negative value in the 'Quantity' field on the 'Transactions' Tab.
So for example: if you originally received 20 pieces and want to reduce it to be 18 pieces, you must enter '-2'

Enter a Reason or Comment for the Correction in the 'Details' tab (optional).
If the items are serial-controlled, then click on the 'Lot-Serial' button and enter the Serial Numbers.

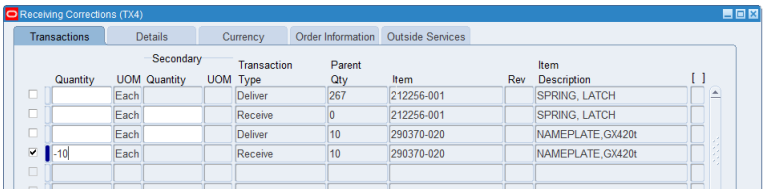
Click on the 'Save' icon in the toolbar.

Note: Use the scroll bar to see more Information on the tabs.



Step 4: In case of a correction of both the 'Deliver' and 'Receive' transactions, proceed with the 'Receive' step of the Correction.

Close the screen and re-open the menu-option and enter the selection criteria. This will refresh the details and show you the correction made in step 3. So you can proceed with the next step.



The receipt is now corrected and the Receiving Transactions will now also show the ‘Correction’ transactions.
