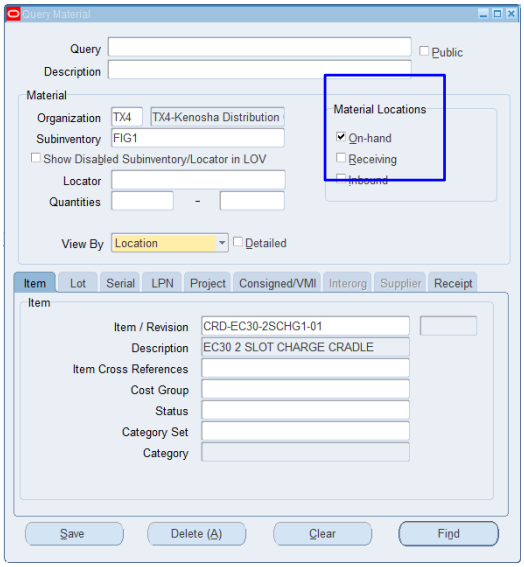
MATERIAL WORKBENCH

The Material Workbench enables you to view material in receiving, on-hand quantities, and intransit material. You can also view material across organizations.

Step 1: Using Oracle Forms, navigate to 'WMS Inquiries' -> 'Material Workbench'



Step 2: You can query the different 'Material Locations':

- On-hand: Material that is in inventory
- Receiving: Material being received
- Inbound: Material expected to be received

To do an 'On Hand' inquiry, enter the following:

- On-hand: Tick the 'On-hand' box
- Organization (optional): Enter the Organization
- Subinventory/Locator (optional): Enter the Subinventory/Locator
- Item (optional): Enter the Item number

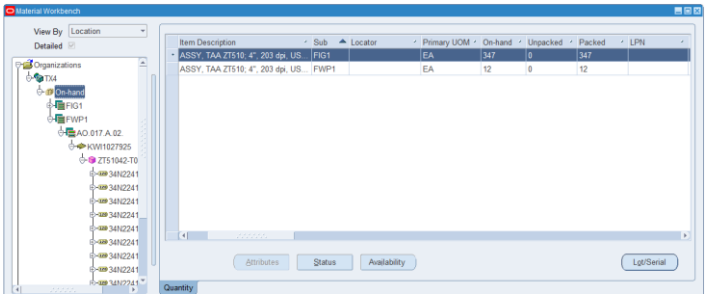
Select the 'View By' option you require, e.g. Location, LPN, Serial

Using the different tabs, you can enter additional selection criteria such as a Serial Number, an LPN or a Receipt

Please note: You can select multiple 'Material Locations' at the same time. However, when doing this, certain selection criteria or tabs may be disabled, e.g., 'Subinventory/Locator' or have limited options, e.g. 'View by'.

Click 'Find' to view the results of your query

Step 3: In the results window you can view the results

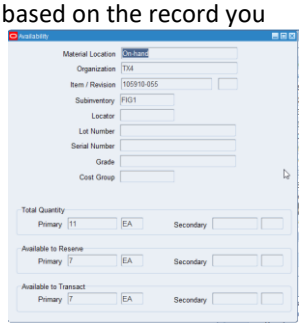


On the left you can drill down to the details you want to see
On the right you can view the details for the selection made on the left

Use the scrollbar to view more information

Please note: If needed, you can also change the 'View By' option from this screen (top left)

Step 4: Using the buttons at the bottom on the right-hand side you can view additional details, based on the record you have selected:



- Lot/Serial: Use this option to check the Lot or Serial numbers
- Availability: Use this option to check the Availability of the inventory:
  - Available to Transact =
    (Quantity On-Hand) - Pending Transactions - Reservations
  - Available to Reserve =
    (Reservable Quantity On-Hand) - Pending Transactions - Reservations
