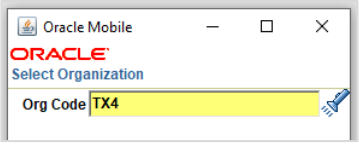
PERFORM CYCLE COUNT

We have scheduled so-called 'Cycle Counts' to count a number of items on a daily basis. By performing these Cycle Counts we ensure that all items are counted at least once every year.

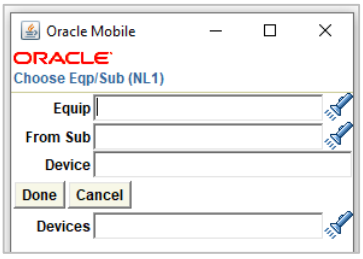
In addition to these daily scheduled counts we can also manually schedule extra counts, or counts may be triggered from an exception during picking (for example a short pick).

Step 1: Using the Mobile Application, navigate to 'Inventory-> 'Counting'

Step 2: Enter the correct Organization and press 'Enter' on the keypad



Step 3: Equipment selection: No need to enter any details. Simply click on 'Done'

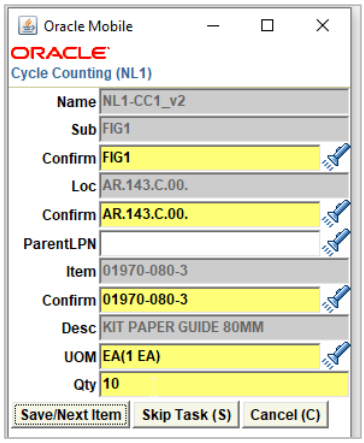


Step 4: Now you will see the first Count Task on your scangun
Scan the location barcode to confirm the subinventory/locator

Then scan the item number

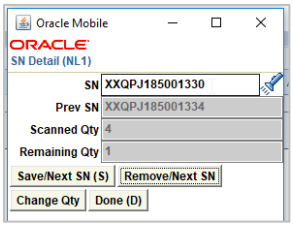
Please note:
If you see additional fields for 'Outer LPN' or 'Schd LPN', then you need to also confirm the LPN by scanning this into the 'ParentLPN' field

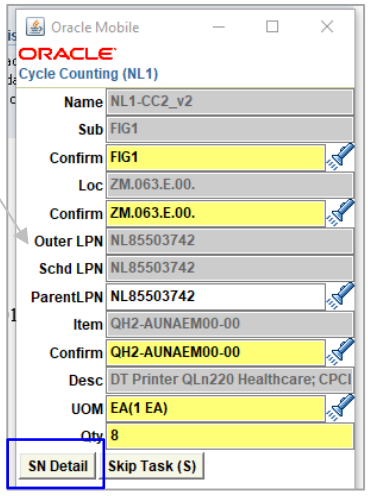
Check the Unit of Measure and
enter the counted quantity in the 'Qty' field



Serialized items
When the counted quantity for a serialized item does not match the quantity expected by the system, you need to scan all the Serial Numbers using the 2D or 1D barcodes.

To do this click on the 'SN Detail' button. As you scan each serial number, the scangun will show the serial number and count down for you via the 'Remaining Qty' field.





Please note: If the same Serial Number is scanned twice, an error will be displayed. The system will also prevent entry of incorrect Serial Numbers if the Operator scans a part number or Country of Origin by mistake

Click on 'Save/Next Item' or 'Done' to complete the count and go to the next Task

The count has been completed. If the counted quantity is different to the expected quantity, then the Inventory Controller can generate a recount for the item/location or approve the variance.
