Vacuum Sealed Parts

Picking and handling parts that are Pre-Sealed

1 Sensitive Parts are a category of inventory that are not necessarily ESD-parts, but still require more stringent picking and handling compared to standard parts we carry

2 If an associate comes across any product that is Vacuum-sealed, they must **NOT** break the seal to complete the order

3 If the order quantity is inconsistent with the parts pre-sealed please inform your Supervisor/Lead right away and they will advise about next steps

DO NOT BREAK ANY VACUUM-SEALED PARTS
